Drosophila melanogaster Cu, Zn superoxide dismutase gene sequence

Jan Kwiatowski, Mayuri Patel and Francisco J. Ayala

Department of Ecology and Evolutionary Biology, University of California, Irvine, CA 92717, USA
Submitted November 28, 1988 EMBL accession no. X13780

A Cu, Zn superoxide dismutase gene sequence was obtained from a clone isolated from the genomic library of *D. melanogaster* Canton S in the Charon 4 vector (1) by hybridization with cDNA (2) from a *D. melanogaster* Oregon R strain (3). The 1844 bp sequence shown below (transcribed region capitalized) differs from an Oregon R genomic SOD sequence (4) by only 3 substitutions (underlined). Pairwise comparisons of the sequences corresponding to the second exon show that our Canton S sequence differs by one transition from the genomic Oregon R sequence but by two from the cDNA Oregon R; whereas the Oregon R genomic and cDNA differ from each other by three transitions.

ACKNOWLEDGEMENTS:

The cDNA clone was provided by Dr. G. Tener; the Canton S genomic library by Dr. T. Maniatis. Research supported by a U.S. DOE grant.
