CORRECTION

Correction: A Pilot Study Examining Physical and Social Warmth: Higher (Non-Febrile) Oral Temperature Is Associated with Greater Feelings of Social Connection

Tristen K. Inagaki, Michael R. Irwin, Mona Moieni, Ivana Jevtic, Naomi I. Eisenberger

There is an error in the fourth sentence of the Results. The correct sentence is: However, adding feelings of connection to the regression model explained an additional 13.4% of the variance in oral temperature and this R^2 change was significant ($F(1, 49) = 8.42, p = .01$).
