Title: Revised proposal for encoding the Lanna script in the BMP of the UCS

Source: UC Berkeley Script Encoding Initiative (Universal Scripts Project)

Authors: Michael Everson, Martin Hosken, and Peter Constable

Status: Liaison Contribution

Replaces: N3121, N2042, N1013

Action: For consideration by JTC1/SC2/WG2 and UTC

Date: 2007-03-21

0. Preface. N3121 was accepted by WG2 and Lanna is at present under ballot. This document revises N3121 to include additional clarifications, to correct a few errors, and to add one additional character, KHUN HIGH CHA (described on page 2). This letter and the additional symbol CAANG are coloured yellow in the code charts.

1. Introduction. The Lanna script is used for three living languages: Northern Thai (that is, Kam Mu'ang), Tai Lue and Khün. In addition, the Lanna script is also used for Lao Tham (or old Lao) and other dialect variants in Buddhist palm leaves and notebooks. The script is also known as Tham or Yuan script. There are 6,000,000 speakers of Northern Thai of whom few are literate in Lanna script, although there is some resurgent interest in the script among the young. There are 670,000 speakers of Tai Lue of whom those born before 1950 are literate in Lanna script. The script has also continued to be taught in the monasteries. There are 120,000 speakers of Khün for which Lanna is the only script.

2. Consonants. Consonants have an inherent *-a* vowel sound. Most consonants have a combining subjoined form, but unlike most other Brahmic scripts, the subjoining of a consonant does not mean that the vowel of the previous consonant is killed. A subjoined consonant may be the first consonant of the following syllable. The encoding model for Lanna is more similar to the Khmer *coeng* model than to the usual *virama* model: the character  LANNA SIGN SAKOT is entered before a consonant which is to take the subjoined form. A subjoined consonant may be attached to a dependent vowel sign. The table below shows the base consonants and the subjoined forms they take; it is organized according to the traditional Brahmic chart. High-tone consonants are marked with superscript ^H and low-tone consonants with superscript ^L. Note that not every low consonant has a single high-consonant equivalent. For instance, the corresponding partner to  LOW NGA is a sequence,  HA +  SAKOT +  LOW NGA =  high nga.

k ^H 		kh ^H 	k ^L 	kh ^L 	ng ^L 
c ^H 		ch ^H 	c ^L 	ch ^L 	ny ^L 
t 		th ^H 	d 	th ^L 	n 
t ^H 		th ^H 	t ^L 	th ^L 	n 
b 	p ^H 	ph ^H 	p ^L 	ph ^L 	m 
y ^L 		r 	l 	w 	ss 
sh ^H 	ss ^H 	s ^H 	h ^H 	ll 	lae 

A number of Lanna characters did not traditionally take subjoined forms, but modern innovations such as that in ກ໌໌ *kəlf* ‘golf’, ກ໌໌ *krāf* ‘graph’, ກ໌໌ *təffī* ‘toffee’ suggest that fonts should make provision for subjoining behaviour for all of them but the historical vocalic r and l:

kx^H ກ໌໌ ກ໌໌ ກ໌໌ kx^L ກ໌໌ ກ໌໌ ກ໌໌ s^L ກ໌໌ ກ໌໌ ກ໌໌ s^L ກ໌໌ ກ໌໌ ກ໌໌
 f^H ກ໌໌ ກ໌໌ ກ໌໌ f^L ກ໌໌ ກ໌໌ ກ໌໌ y^H ກ໌໌ ກ໌໌ ກ໌໌ h^L ກ໌໌ ກ໌໌ ກ໌໌ rue ກ໌໌ lue ກ໌໌

In Northern Thai, the letters ກ໌໌ LOW CA and ກ໌໌ LOW SA are not used, being replaced by language-specific forms ກ໌໌ NORTHERN THAI LOW CA and ກ໌໌ NORTHERN THAI LOW SA.

In Khün, the letter ກ໌໌ HIGH CHA is not used, being replaced by the language-specific form ກ໌໌ KHUN HIGH CHA. In Khün the script was reanalyzed and the character is formed in the same way as ກ໌໌ LOW CHA is; there is no loop and the first part of the glyph is related to that of ກ໌໌ HIGH SA. In a Khün font the shapes are: ກ໌໌ KHUN HIGH CHA, ກ໌໌ LOW CHA, ກ໌໌ HIGH SA.

Due to their Brahmic etymology, some consonants are represented using sequences of characters. In particular, in Northern Thai the consonant *low cha* may be represented by the sequence ກ໌໌ NORTHERN THAI LOW CA + ກ໌໌ SAKOT + ກ໌໌ LOW YA (yielding ກ໌໌), although 1A2E ກ໌໌ LOW CHA is also often used as the spelling for this consonant. In Tai Lue, the consonant *high cha* is represented by ກ໌໌ HIGH CA + ກ໌໌ SAKOT + ກ໌໌ HIGH SA (yielding ກ໌໌), and the consonant *low cha* is represented by ກ໌໌ LOW CA + ກ໌໌ SAKOT + ກ໌໌ LOW CHA. (yielding ກ໌໌).

Consonants may also be subjoined to digits, as in ກ໌໌ ‘thrice’, which is ກ໌໌ THAM DIGIT THREE + ກ໌໌ SAKOT + ກ໌໌ LOW TA.

A note should be made regarding ກ໌໌ LETTER GREAT SA. Many occurrences of ກ໌໌ SA followed by ກ໌໌ SA are rendered using a ligature ກ໌໌ GREAT SA (as in ກ໌໌ *sawassadī* ‘hello’), but there are some words in which the ligature does not occur and a normal stack of ກ໌໌ SA and subjoined ກ໌໌ SA (that is, ກ໌໌) may be required. Therefore the ກ໌໌ LETTER GREAT SA is encoded separately following the same model as that for the GREAT SA in Myanmar. In the unlikely event that GREAT SA should follow a SAKOT, the subscript form ກ໌໌ would occur.

3. Independent vowels. Independent vowels are used as in other Brahmic scripts as well. Northern Thai LETTER A (marked with superscript ^m) differs from that used in Tai Lue and Khün. The LETTER OO vowel is not used in Northern Thai.

a ກ໌໌	^m a ກ໌໌	i ກ໌໌	ī ກ໌໌
u ກ໌໌	ū ກ໌໌	ē ກ໌໌	ō ກ໌໌

4. Dependent consonant signs. Seven dependent consonant signs are used. Two of these are used as medials: ກ໌໌ CONSONANT SIGN MEDIAL RA and ກ໌໌ CONSONANT SIGN MEDIAL LA form clusters and immediately follow a consonant: ກ໌໌ *kra*, ກ໌໌ *kla*. ກ໌໌ CONSONANT SIGN MAI KANG LAI is used as a final *-ng* in Northern Thai and Tai Lue: ກ໌໌ *kang*. ກ໌໌ CONSONANT SIGN KHUN MAI KANG LAI is used as a final *-ng* in Khün: ກ໌໌ *kang*. ກ໌໌ CONSONANT SIGN FINAL NGA is also used as a final *-ng* in Northern Thai: ກ໌໌ *kang*. ກ໌໌ CONSONANT SIGN LOW PA is used unusually in a Tai Lue word, ກ໌໌ *kappa* ‘pregnant’; the normal rendering of ກ໌໌ LOW PA + ກ໌໌ SAKOT + ກ໌໌ LOW PHA would be ກ໌໌. The last of these signs has two readings: ກ໌໌ CONSONANT SIGN HIGH RATHA OR LOW PA represents ກ໌໌ HIGH RATHA in ກ໌໌ *santhān* ‘shape’ and in ກ໌໌ *ratthabāl* ‘government’ (note the alternate spelling of this as ກ໌໌), and it represents ກ໌໌ LOW PA in ກ໌໌ *sappa* ‘omniscience’ and in ກ໌໌ *ampa* ‘mango’. After ກ໌໌ SAKOT the two base letters have their normal

subjoined forms ຸ and ູ; the former is rare, but attested as in ພະຍາຍາມສູງສູງສູງສູງສູງ *sathāban rājabhāṭṭh chyañ hmai* ‘Chiang Mai College of Further Education’; the latter is also somewhat rare, as in ບຸນບຸນ *banop burus* ‘disciple’. Special note should be taken that the letter U+1A30 ຸ HIGH RATHA—whose glyph looks like U+1A35 ົ and U+1A5D ູ brought together—is not the same thing as ຸ, which is U+1A2F ຸ RATA + U+1A5D ູ CONSONANT SIGN HIGH RATHA OR LOW PA. This is because U+1A30 ຸ (Brahmic *ṭha*) is not linguistically decomposable whereas U+1A2F ຸ + U+1A5D ູ is (ສູ Brahmic *ṭṭha*). Users need to be aware of the distinction. Khün does not use U+1A30 ຸ, but uses the sequence U+1A2F ຸ + U+1A5D ູ (see Figure 12). In Lanna, however, ຸ can be used as alternate *spelling* for U+1A30 ຸ.

5. Dependent vowel signs. Dependent vowel signs are used in a manner similar to that employed by other Brahmic scripts, though Lanna makes use of a great many of them in combination. In one instance, a ligature is formed with a consonant: ຸ ຸ NA + ົ ົ AA = ຸ ຸ *nā*. The vowels shown here are used in Northern Thai (the examples are taken from Udom Rungrueangsri’s 2004 dictionary; there are other orthographic conventions and other combinations doubtless occur):

- 1. ຸ ko = ຸ ka^H + ົ o
- 2. ຸ kaṅ = ຸ ka^H + ົ mai kang
- 3. ຸ kaṅ = ຸ ka^H + ົ mai kang lai
- 4. ຸ ka = ຸ ka^H + ົ mai sat
- 5. ຸ kua? = ຸ ka^H + ຸ sakot + ົ wa + ົ o + ົ a
- 6. ຸ kua = ຸ ka^H + ຸ sakot + ົ wa + ົ o
- 7. ຸ kua = ຸ ka^H + ຸ sakot + ົ wa
- 8. ຸ kṶ: = ຸ ka^H + ຸ oa below + ົ mai kang
- 9. ຸ kṶ: = ຸ ka^H + ຸ oa below
- 10. ຸ ka? = ຸ ka^H + ົ a
- 11. ຸ ka: = ຸ ka^H + ົ aa
- 12. ຸ ka: = ຸ ka^H + ົ tall aa
- 13. ຸ kam = ຸ ka^H + ົ aa + ົ mai kang
- 14. ຸ kam = ຸ ka^H + ົ tall aa + ົ mai kang
- 15. ຸ ki = ຸ ka^H + ົ i
- 16. ຸ ki: = ຸ ka^H + ົ ii
- 17. ຸ ku = ຸ ka^H + ົ ue
- 18. ຸ ku: = ຸ ka^H + ົ uue
- 19. ຸ ku = ຸ ka^H + ົ u
- 20. ຸ ku: = ຸ ka^H + ົ uu
- 21. ຸ ke? = ຸ ka^H + ົ e + ົ a
- 22. ຸ ke: = ຸ ka^H + ົ e
- 23. ຸ ke? = ຸ ka^H + ົ ae + ົ a
- 24. ຸ ke: = ຸ ka^H + ົ ae
- 25. ຸ k3? = ຸ ka^H + ົ e + ຸ oa below + ົ i + ົ a
- 26. ຸ k3: = ຸ ka^H + ົ e + ຸ oa below + ົ i (pronounced *kia* when followed by a final consonant)
- 27. ຸ k3? = ຸ ka^H + ົ e + ຸ oa below + ົ uue + ົ a (used in Khün)
- 28. ຸ k3: = ຸ ka^H + ົ e + ຸ oa below + ົ uue (used in Khün)
- 29. ຸ ko = ຸ ka^H + ົ e + ົ mai sat + ົ aa
- 30. ຸ kṶ: = ຸ ka^H + ົ oa above
- 31. ຸ ko: = ຸ ka^H + ົ e + ົ aa
- 32. ຸ kia? = ຸ ka^H + ຸ sakot + ົ ya^L + ົ e + ົ a
- 33. ຸ kia = ຸ ka^H + ຸ sakot + ົ ya^L + ົ e

- 34. ကျ kia = က ka^H + ◻ sakot + ဃ ya^L
- 35. ကျိအိအိ kia? = က ka^H + င e + ဝ oa below + ဝိ i + အ a^m + အ a
- 36. ကျိအိ kia = က ka^H + င e + ဝ oa below + ဝိ i + အ a^m
- 37. ကေ ko? = က ka^H + င oo + အ a
- 38. ကေ ko: = က ka^H + င oo
- 39. ကေ့ ကေ? = က ka^H + င oo + ဝ oh + အ a
- 40. ကျ ကျ = က ka^H + မ် mai sat + ◻ sakot + ဃ ya^L
- 41. ကိ ကျ = က ka^H + ဝိ tham ai
- 42. ကေ ကျ = က ka^H + င ai
- 43. ကေ့ ကျ = က ka^H + င ai + ◻ sakot + ဃ ya^L
- 44. ကျ ကျ = က ka^H + ဝ oy (used in Khün)

5.1. TALL AA. Both ဝ AA and ဝိ TALL AA are encoded because context cannot be relied on to determine which one is used. Choice of the two can be a question of spelling: TALL AA is typically used with the following consonants: ဃ BA, ဝိ WA, ဖိ LOW TA, ဝိ LOW THA, and ဝိ LOW KA. Udom Rungrueangsri notes that some textbooks say to write ဝိ HIGH CA and ဝိ LOW PA, and others ဝိ HIGH CA, ဝိ RA, and ဝိ LOW PA as well (even though these may also be written ဝ, ဝ, ဝ, and ဝ).

5.2. AM. The written representation of /am/ involves two visual components: ဝ VOWEL SIGN AA (or ဝိ VOWEL SIGN TALL AA) and ဝိ MAI KANG, which are stored in that order (since final consonants are always stored after their vowels). In the case of /am/ the MAI KANG is often rendered as part of the preceding cluster to VOWEL SIGN AA. Northern Thai treats AM similarly to Thai AM; it places the MAI KANG glyph to the left of the -AA vowel (whether over the previous cluster or between the clusters): ဝ, ဝိ. In Khün and Lue, the MAI KANG render the MAI KANG over the -AA vowel: ဝံ, ဝိ.

5.3. Dependent vowel signs in Khün. The Khün character ဝ oy is not used in Northern Thai. Khün vowel order is quite different from that of Northern Thai.

- 1. ကေ ka? = က ka^H + အ a
- 2. ကေ ka: = က ka^H + ဝ aa
- 3. ကိ ကေ: = က ka^H + ဝိ tall aa
- 4. ကိ ကိ = က ka^H + ဝိ i
- 5. ကိ ကိ: = က ka^H + ဝိ ii
- 6. ကေ ကေ = က ka^H + ဝ u
- 7. ကေ ကေ: = က ka^H + ဝ uu
- 8. ကေ ke? = က ka^H + င e + အ a
- 9. ကေ ke: = က ka^H + င e
- 10. ကေ့ ကေ = က ka^H + ◻ sakot + ဃ ya^L + င e
- 11. ကေ့ ကေ? = က ka^H + င ae + အ a
- 12. ကေ့ ကေ: = က ka^H + င ae
- 13. ကိ ကေ = က ka^H + ဝိ ue
- 14. ကိ ကေ: = က ka^H + ဝိ uue
- 15. ကေ ko? = က ka^H + င oo + အ a
- 16. ကေ ko: = က ka^H + င oo
- 17. ကေ ko: = က ka^H + င e + ဝ aa
- 18. ကေ့ ကေ? = က ka^H + ◻ sakot + ဝ wa + ဝိ o + အ a
- 19. ကေ့ ကေ = က ka^H + ◻ sakot + ဝ wa + ဝိ o
- 20. ကေ့ ကေ? = က ka^H + င oo + ဝ oa below + အ a

21. ကံ ko: = က ka^H + ဝံ oa above
22. ကေံ k3? = က ka^H + ဝဲ e + ဝံ oa below + ဝီ uue + ဝံ a
23. ကေံ k3: = က ka^H + ဝဲ e + ဝံ oa below + ဝီ uue
24. ကေံ kaj = က ka^H + ဝဲ ai
25. ကေံ kaj = က ka^H + ဝဲ ai + ဝံ sakot + ဝံ ya^L
26. ကေံ ko = က ka^H + ဝဲ oo + ဝံ mai sat
27. ကေံ kaw = က ka^H + ဝဲ e + ဝံ mai sat + ဝံ aa
28. ကေံ kaṅ = က ka^H + ဝံ mai kang
29. ကေံ kaṅ = က ka^H + ဝံ final nga
30. ကေံ ka = က ka^H + ဝံ mai sat + ဝံ sakot + ဝံ nga
31. ကေံ kiṅ = က ka^H + ဝီ i + ဝံ mai kang
32. ကေံ kiṅ = က ka^H + ဝီ i + ဝံ sakot + ဝံ nga
33. ကေံ kam = က ka^H + ဝံ aa + ဝံ mai kang
34. ကေံ kam = က ka^H + ဝံ mai sat + ဝံ sakot + ဝံ ma
35. ကေံ kam = က ka^H + ဝံ mai sat + ဝံ ma
36. ကေံ kaj = က ka^H + ဝံ oy (used in Khün)

6. Tone marks. Tone marks are combining characters. Lanna has two tone marks, ဝံ SIGN TONE-1 and ဝဲ SIGN TONE-2, which are used in Lue and in Northern Thai, which are positioned over (and follow) the vowel over the base consonant. Three additional tone marks are used in Khün, ဝံ SIGN KHUN TONE-3, ဝံ SIGN KHUN TONE-4, and ဝံ SIGN KHUN TONE-5, which are rendered above and to the right of the vowel over the base consonant. They are stored following the vowel over the base consonant or consonant stack. If there is no vowel over a base consonant, then the tone is rendered over the consonant—this is the same way tones are treated in the Thai script. In the case of ဝံ VOWEL SIGN AM and ဝံ VOWEL SIGN TALL AM, the tone is stored *before* the vowel sign, just as in the Thai script.

7. Other combining marks. ဝံ SIGN RA HAAM is used in Northern Thai to indicate that the character or characters it follows are not sounded. The precise range of characters not to be sounded is not defined (that is, it's a reading rule), although it does not extend beyond one cluster. In Tai Lue, RA HAAM is used as a final *-n*. The mark ဝံ SIGN MAI SAM has a range of uses in Northern Thai:

- It is used as a repetition mark, stored as the last character in the word to be repeated: တံ tang ‘be different’, တံ tangtang ‘be different in my view’.
- It is used to disambiguate the use of a subjoined letters. A subjoined letter may be a medial or final, or it may be the start of a new syllable. When the MAI SAM is used to indicate that a consonant begins a new syllable, it is stored following the subjoined form to indicate the consonant being at the start of a new syllable: တံ thanon ‘path’ (without the MAI SAM, တံ would be *thonra*).
- It is used to mark “double-acting” consonants. It is stored where the consonant would be stored if there were a separate consonant used, so တံ khawkhong ‘belongings’ (without MAI SAM it is written တံ).

The effect of these rules is that MAI SAM is stored in the same place regardless of the precise function it is being used for.

The ဝံ COMBINING CRYPTOGRAMMIC DOT is used singly or multiply beneath letters to give each letter a different value according to some hidden agreement between reader and writer. See Figure 6 for examples.

8. Digits. Two sets of digits are in common use, a “secular” set ဝ၅၃၄၅၆၇၈၉ and an “ecclesiastical” set ဝ၀၁၂၃၄၅၆၇၈၉. European digits are also found in books. Since digits from either set may take subjoined consonants and vowels, the secular set was not unified with the Myanmar digits to which they are related.

9. Collating order. There is no firmly established sorting order for Lanna script. Each dictionary seems to have its own basic order that it aims to follow, though often inconsistently. There are various sort orders evidenced by the two lists given in the Dependent Vowels section. Even when an order can be established, it is not often one that is amenable to being expressed using the UCA. Therefore the order proposed here is merely as a consistent order that goes some way towards a possible sort for Lanna. This order is based on Northern Thai and Thai.

◌[◌] *mai kang* U+1A74 < ◌[◌] *a* U+1A61 < ◌[◌] *ka^h* U+1A20 < ◌[◌] *kha^h* U+1A21 <

◌[◌] *khun tone-5* U+1A79 << ◌[◌] *ra haam* U+1A7A << ◌[◌] *mai sam* U+1A7B <<
◌[◌] *cryptogrammic dot* U+1A7F

◌[◌] *sakot* U+1A60 is ignored for sorting purposes.

10. Linebreaking. Opportunities for linebreaking are lexical, but a linebreak may not be inserted between a base letter and a following combining mark. A linebreak should also not be inserted between SAKOT and a following consonant letter. There is no line-breaking hyphenation.

11. Punctuation. The four signs ᨧ KAAᨶ, ᨧᨶ KAANKUU, ᨧᨶᨶ SATKAAN, and ᨧᨶᨶᨶ SATKAANKUU, are used in a variety of ways, with progressive values of finality. It can be observed that the last of these is similar to U+0E5A ᨧᨶᨶ THAI CHARACTER ANKHANKHU. The four punctuation characters are part of a patterned set in Lanna and SATKAANKUU will not be identical to ANKHANKHU in fonts, so it is best to encode the whole set for Lanna. At the end of a section, ᨧᨶᨶ KAANKUU and ᨧᨶᨶᨶ HANG may be combined with ᨧᨶᨶ REVERSED ROTATED RANA in a number of ways: ᨧᨶᨶᨶᨶᨶ, ᨧᨶᨶᨶᨶᨶᨶ, ᨧᨶᨶᨶᨶᨶᨶᨶᨶ, and ᨧᨶᨶᨶᨶᨶᨶᨶᨶᨶ may all occur. The symbols ᨧᨶᨶᨶ WIANG, ᨧᨶᨶᨶᨶᨶ WIANGWAAK, and ᨧᨶᨶᨶᨶᨶᨶ SAWAN are logographs for ‘city’, ‘village’ (literally ‘open city’), and ‘heaven’ respectively. European punctuation like QUESTION MARK, EXCLAMATION MARK, PARENTHESES, and QUOTATION MARKS is also used. The three signs ᨧᨶᨶᨶ KEOW ‘courtyard’, ᨧᨶᨶᨶᨶ HOY ‘oyster’, and ᨧᨶᨶᨶᨶᨶᨶ DOKMAI ‘flower’ are used as dingbats and as section starters; ᨧᨶᨶᨶᨶᨶ and ᨧᨶᨶᨶᨶᨶᨶᨶ have been observed. Another symbol used is ᨧᨶᨶᨶ CAANG ‘elephant’, normally accompanied with the long AA: ᨧᨶᨶᨶᨶᨶ (compare ᨧᨶᨶᨶᨶᨶ *cāng* ‘elephant’). The mark ᨧᨶᨶᨶ MAI YAMOK is used in the same way as its Thai counterpart, U+0E46 ᨧᨶᨶᨶ THAI CHARACTER MAIYAMOK.

12. Extensions. Extensions for the archaic version of Lanna used in Laos, called Lao Tham, may prove necessary in future. The user community for Lao Tham is extremely small, and this proposal meets the immediate requirements of the living communities which use Lanna script.

13. A regular expression description. The following description may assist in implementation:

`Ci ((S Cs)|H|MS)? M? Vm? Vp? Vl? Vu? T? Vf? A? (S Cf)? Fu?)* Fm?`

Where:

Ci (Initial Consonant) = 1A20 .. 1A57, 1A5F, 1A80 .. 1A89, 1A90 .. 1A99
 MS (Mai Sam) = 1A7D
 S (Sakot) = 1A60
 Cs (Subjoined Consonant) = 1A20 .. 1A4D, 1A57 excluding anything that cannot be subjoined
 H (Hang) = 1A5E
 M (Medial) = 1A58, 1A59, 1A60 1A48
 Vm (Medial Vowel) = 1A60 [1A42, 1A48]
 Vp (Pre Vowel) = 1A6E .. 1A72
 Vl (Lower Vowel) = 1A69, 1A6A, 1A6C
 Vu (Upper Vowel) = 1A62, 1A65 .. 1A68, 1A6B, 1A73, 1A74
 T (Tone) = 1A75 .. 1A79
 Vf (Following Vowel) = 1A63 .. 1A64, 1A4E, 1A4F
 A (Short a) = 1A61
 Cf (Final Consonant) = 1A20 .. 1A4D
 Fu (Final Upper diacritic) = 1A5A .. 1A5D, 1A6D, 1A74
 Fm (Final Modifier) = 1A7A

This does not describe a complete linguistic syllable, because that can have a following base consonant and subsequent chaining. It is not a cluster because Vf could well take a cursor before it. It describes the orthographic syllable. The regular expression describes has a number of properties.

- Every word forming character in the Lanna block from 1A20..1A7B appears somewhere in the regular expression. So that at least means we know at least one place for each code to go.
- A number of characters appear in more than one element. This shows some of the ambiguity that exists in the Lanna script. For example, 1A74 can be both a Vu and an Fu. Notice also the number of places a SAKOT WA (1A60 1A47) can turn up.

While the regular expression given here is fairly complete when considering modern usage of the Lanna script, it is also too generous allowing ridiculous sequences that would never occur. According to this expression you could have WA SAKOT WA SAKOT WA SAKOT WA SAKOT WA. The purpose of this regular

expression, therefore, is not legal sequence constraint, but ordering. Given a string of elements, how should they be ordered? The Lanna script, historically, has been very creative in its spelling and therefore there is probably historic precedent for almost any appropriate deviation from this ordering for some historic case or other. It may, therefore, not be appropriate for this order, or any other, to be enshrined and enforced as part of the encoding standard. It is up to the implementations to support their users.

14. Consonant conjoining behaviours. While Lanna is a Brahmic script and shares many attributes common to Brahmic scripts, it is atypical in the variety of ways in which consonant conjoining occurs. The encoding model for Lanna is similar to that for Myanmar and Khmer, using a CEONG-like character plus some combining medial-consonant characters. In order to fully grasp the Lanna encoding model, however, it is necessary to understand the various ways in which consonant conjoining is used.

Typical behaviour for Brahmic scripts is to have structural units in the text often referred to as *orthographic syllables*. These units consist of an initial consonant or consonantal sequence plus satellite vowel marks. Because all consonants are combined into the initial portion of the orthographic syllable, the boundaries do not align exactly with phonological syllables; yet orthographic and phonological syllables correlated roughly one-to-one.

Lanna script has these same behaviours, but it also uses conjoining in ways not found in Brahmic scripts generally. For instance, a single orthographic syllable can encompass two full phonological syllables while maintaining the same basic formal organizational structure of the textual elements: a stack of conjoining consonant typeforms with satellite vowel marks.

The following is a break-down of the various ways in which consonant conjoining is used in Lanna script. The following notation is used:

- boundaries of phonological syllables are indicated by the FULL STOP “.”
- CURLY BRACKETS are used to indicate how text elements are organized into conjoining units (base + conjoining consonant + other signs); that is, a string “{... }” represents one conjoining unit
- the consonant letter ๒ HIGH HA is indicated as “h”
- consonant letters ๑ LOW YA and ๐ WA when used in the representation of diphthongs /ia/ and /ua/ will be indicated as “CV”.

Examples are provided, along with the encoded character sequences that would be used to represent them. This is done to make clear how the encoding model would apply to these various kinds of text scenario.

In describing the different ways of using conjoining, it is only necessary to refer to consonant and vowel elements. In actual text, other elements will occur, such as tone marks, and, of course, the character SAKOT.

14.1. High-tone-class sonorant consonants are written by conjoining the low-class sonorant to HIGH HA (this is common in Southeast Asian scripts):

h C ... is written as {h C ...}

For example, /hni:/: ๒ = HA^H + SAKOT + NA + II

14.2. Phonological syllable-initial consonant clusters are conjoined (this is typical across Brahmic scripts, though not used in Thai or Lao):

. C1 C2 ... is written as {C1 C2 ...}

For example, /khwaen/: $\text{cc}\overset{\curvearrowright}{\text{ခွေ}} = \text{KXA}^{\text{L}} + \text{SAKOT} + \text{WA} + \text{AE} + \text{TONE-2} + \text{RA}$

14.3. The consonant letters LOW YA and WA are written in conjoined form as part of the representation for certain vowels, such as diphthongs /ia/ and /ua/. (This may be derived historically from syllable-initial clusters, and so could be considered a variation of 14.2.)

. C1 C_V ... is written as {C1 C_V ... }

For example, /hua/: $\text{h}\overset{\circ}{\text{ဟွာ}} = \text{HA}^{\text{H}} + \text{SAKOT} + \text{WA} + \text{SIGN O}$

14.4. A sequence of phonological syllable-final and syllable-initial consonants are conjoined (this is typical across all Brahmic scripts, except in Southeast Asia):

... C1 . C2 ... is written as {...}{C1 C2 ...}

For example, /dang ni:/: $\text{d}\overset{\text{´}}{\text{ṅ}}\overset{\text{´}}{\text{နီ}} = \text{DA} + \text{MAI SAT} + \text{TONE-1} + \text{NGA} + \text{SAKOT} + \text{NA} + \text{II} + \text{TONE-2}$

14.5. The initial and final consonants of a phonological syllable are conjoined (this is uncommon among Brahmic scripts, but is very commonly-used in Lanna):

. C1 V C2 . is written as {C1 V C2}

For example, /hin/: $\text{h}\overset{\text{´}}{\text{ိ}} = \text{HA}^{\text{H}} + \text{I} + \text{SAKOT} + \text{NA}$

14.6. The initial consonants of two consecutive phonological syllables are conjoined (this is uncommon among Brahmic scripts):

. C1 V . C2 V ... is written as {C1 V C2 V}

For example, /bo.mi:/: $\text{b}\overset{\text{´}}{\text{ိ}} = \text{BA} + \text{MAI KANG} + \text{TONE-1} + \text{SAKOT} + \text{MA} + \text{II}$

Or, for example, /thanon/: $\text{t}\overset{\text{´}}{\text{ṅ}}\overset{\text{´}}{\text{နာ}} = \text{THA}^{\text{H}} + \text{SAKOT} + \text{NA} + \text{MAI SAM} + \text{SIGN O} + \text{RA}$

14.7. The final consonant of a phonological syllable is conjoined to the vowel signs AA or TALL AA—these are the vowel signs that are spacing and position to the right of the initial consonant (this is uncommon among Brahmic scripts).

. C1 V C2 . is written as {C1}{V C2}

For example, /ta:m/: $\text{t}\overset{\text{´}}{\text{ာ}} = \text{TA}^{\text{H}} + \text{AA} + \text{SAKOT} + \text{MA}$

14.8. A further kind of conjoining is formally like 14.7 but involving two syllables where the second syllable consists of a consonant conjoined to AA or TALL AA with an above or below vowel mark (uncommon among Brahmic scripts, and rare even in Lanna).

. C1 V1 . C2 V2 is written as {C1}{V1 C2 V2}

For example, /pya:.thi/: ငျှိဝ် = PA^L + SAKOT + YA^L + AA + SAKOT + THA^L + I

14.9. These different kinds of conjoining can co-occur in a single conjoining unit. It should be noted in particular that this can result in a conjoining stack of three (or perhaps more?) consonants.

For example, /plian/, which combines 14.2 and 14.3: ပျှိၵ် = PA^H + SAKOT + LA + SAKOT + YA^L + TONE-1 + RA

Or, for example, /maen.wa:/: မေၵ် = MA + AE + TONE-2 + SAKOT + NA + SAKOT + WA + TONE-1 + AA

14.10. Because consonants can conjoin in different contexts, ambiguous readings can result. In other words, two different encoded sequences corresponding to two different readings may display identically. For instance, because YA and WA can occur as part of a syllable-initial consonant cluster, but can also be used to write certain vowels or can occur as syllable-final consonants, and because in all these cases they would conjoin to the first consonant, words written with these as conjoined consonants may have different readings. For example, /swe/ မေၵ် SA^H + SAKOT + WA + AE + TONE-1 /swe/ (MFL p764) displays identically to another word in the dictionary: /sew/ မေၵ် SA^H + TONE-1 + AE + SAKOT + WA (MFL, p766). Notice that both words appear with identical renderings, but they occur in different places in the dictionary corresponding to the different readings.

15. Syllable shapes. The following description exemplifies the ways in which characters can interact to form syllables. It derives from a book called *Aksāra Lānā*.

1. ယူ yuu = ယ ya^L + ယူ uu
2. မီ mii = မ ma + မီ ii
3. ဟူ hmuu = ဟ ha^L + [] sakot + မာ ma + ယူ uu
4. ဟမီ hmii = ဟ ha^L + [] sakot + မာ ma + မီ ii
5. နွေ phua = ယ pha^L + [] sakot + ဝ wa + ဝ o
6. ဟွဲ law = ဟ ha^L + [] sakot + လ la + ဝ oa below + မိ mai kang + ဝ tone-1
7. မာ ma = မာ ma + ဝ aa
8. ဟဲ hai = ဟ ha^L + ဝ ai + ဝ tone-1
9. မာ mia = မာ ma + [] sakot + ယ ya^L
10. ဝျာ wiang = ဝ wa + [] sakot + ယ ya^L + ဂ nga^L
11. ဟာ haam = ဟ ha^L + ဝ aa + [] sakot + မာ ma
12. သာ daam = သ da^L + ဝ aa + မိ mai kang
13. မေ khaw = မ kha^H + ဝ e + [] sakot + ဝ wa
14. ဟာ hmaa = ဟ ha^L + [] sakot + မာ ma + ဝ aa
15. ကျာ krap = က ka^H + [] medial ra + ဝ aa + [] sakot + ပာ pa^H
16. ကာ pram = က pa^L + [] medial ra + ဝ tone-1 + ဝ aa + မိ mai kang
17. ကာ krong = က ka^H + [] medial ra + ဝ oa below + ဂ nga^L
18. ကာ som = သ sa^H + [] medial ra + ဝ o + မာ ma + [] sakot + ရာ rana + မိ ra haam
19. ကာ suam = သ sa^H + [] medial ra + [] sakot + ဝ wa + ဝ o + မာ ma
20. သာ deuan = သ da^L + ဝ e + ဝ oa below + မိ uue + ရာ ra

- 21. ຣົ້ອ reua = ຣ ra + ະ e + ັ oa below + ື uue + ຂ a
- 22. ຣົ້ອ leua = ຮ ha^l + ັ sakot + ັ la + ະ e + ັ oa below + ື uue + ຂ a
- 23. ຮໍາ hmaam = ຮ ha^l + ັ sakot + ັ ma + ັ tone-1 + ັ aa + ັ mai kang
- 24. ສົ້ອ smer smer = ສ sa^H + ັ sakot + ັ ma + ັ oa below + ື i + ັ mai sam
- 25. ຮົ້ອ hmeuang = ຮ ha^l + ັ sakot + ັ ma + ະ e + ັ oa below + ື uue + ັ nga^l
- 26. ຮົ້ອ hyeuang = ຮ ha^l + ັ sakot + ັ ya^l + ະ e + ັ oa below + ື uue + ັ nga^l
- 27. ຮໍາ hmon = ຮ ha^l + ັ sakot + ັ ma + ັ o + ັ tone-1 + ັ ra
- 28. ຮົ້ອ hlaay = ຮ ha^l + ັ sakot + ັ la + ັ aa + ັ sakot + ັ ya^l
- 29. ຮົ້ອ hleuang = ຮ ha^l + ັ sakot + ັ la + ະ e + ັ oa below + ື uue + ັ nga^l

16. Unicode Character Properties. Combining classes for Lanna diacritics are all 0. Using other combining classes might work, but we do not favour this for two reasons. First, it will not do away with visual ambiguity, since such ambiguity is inherent in the script. Second, there are bound to be other interesting sequences which require odd combinations that this canonical ordering will probably break. Note in particular that SAKOT is not 9, because SAKOT can follow vowels in Lanna.

๕.๓.๑๔ คำกลุ่มพิเศษ

“คำกลุ่มพิเศษ” เป็นคำที่สร้างขึ้น มีความหมายเฉพาะ ตัวอย่างเช่น

ว	คือ	กะใสไม้ขีด	อ่านว่า	ตัวก้อ
ว	คือ	ไม้กำใสก้อ	อ่านว่า	หลังตุ่น
อ	คือ	ตัววะใสไม้กี้	อ่านว่า	ข้าง
อ	คือ	ตัวหะใสไม้กี้	อ่านว่า	เหมี้ยง
อ	คือ	ตัววะซ้อนตัวระตะ	อ่านว่า	ตั้งรือ
⊕	คือ	ตัววะไขว่เกียง	อ่านว่า	เวียง
⊕	คือ	ตัววะหวากไขว่เกียง	อ่านว่า	เวียงหวาก
อ		อ่านว่า	เข้าดอกดอกไม้	
อ		อ่านว่า	เข้าดอกดอกไม้เทียน	
ว	=	สะหวัน (สวรรณ)		
ว	=	สะหรี		
อ	=	ที่		

Figure 5. Sample from a reader in Northern Thai, showing ⊕ SIGN WIANG, ⊕ SIGN WIANGWAAK, and ว SIGN SAWAN.

๓. ใช้พยัญชนะเป็นหลักแล้วใช้จุดวงกลมเล็กๆ เพิ่มจำนวนลงไปเพื่อ
กำหนดว่า หมายถึงอักษรใด เช่น

๓ = ๓ (ก) ๓ = (ข) ๓ = (ค) ฯลฯ

ตัวอย่าง ขขขขขขข = ๓๓๓ (วิฑูร)

[ข = ๓ (ก) ข = ๓ (ข) ข = ๓ (ค) ข = ๓ (ง) ข = ๓ (จ)]

Figure 6. Sample from a reader in Northern Thai, showing examples of ◦ COMBINING CRYPTOGRAMMIC DOT. The number of dots under a letter seem to indicate the number of places in a varga the reader should count to decode the intended letter.

ตัวเลข			
ภาษาล้านนา		ไทย	อารบิก
ตัวเลขในธรรม	ตัวเลขโหรา		
๑	๑	๑	1
๒	๒	๒	2
๓	๓	๓	3
๔	๔	๔	4
๕	๕	๕	5
๖	๖	๖	6
๗	๗	๗	7
๘	๘	๘	8
๙	๙	๙	9
๑๐	๑๐	๑๐	10

ข้อสังเกต เลขศูนย์ของภาษาล้านนาเป็นรูปวงรีในแนวนอน หรือถ้าเป็นวงกลมจะมีขนาดเล็กกว่าตัวเลขตัวอื่น เพื่อป้องกันไม่ให้เขียนเหมือน "ตัววะ" ในขณะที่ เลขศูนย์อารบิก เป็นรูปวงรีในแนวตั้ง ส่วนเลขศูนย์ภาษาไทยกลางเป็นรูปวงกลม

Figure 7. Sample from a reader in Northern Thai, showing the Lanna digits alongside the Lanna Tham digits.

สระเดี่ยว-สระผสม

๑	- ะ	๑	- โะ	๑	- ิ
๒	- ะ	๑	- โะ	๒	- ะ, ะ
๓	- ะ	๑	- โะ	๓	- ะ
๔	- ะ	๑	- โะ	๔	- ะ
๕	- ะ	๕	- ะ	๕	- ะ
๖	- ะ	๖	- ะ	๖	- ะ, ะ
๗	- ะ	๗	- ะ	๗	- ะ
๘	- ะ	๘	- ะ	๘	- ะ
๙	- ะ	๙	- ะ	๙	- ะ
๑๐	- ะ	๑๐	- ะ	๑๐	- ะ

Figure 8. Sample from a reader in Northern Thai, showing dependent vowels.

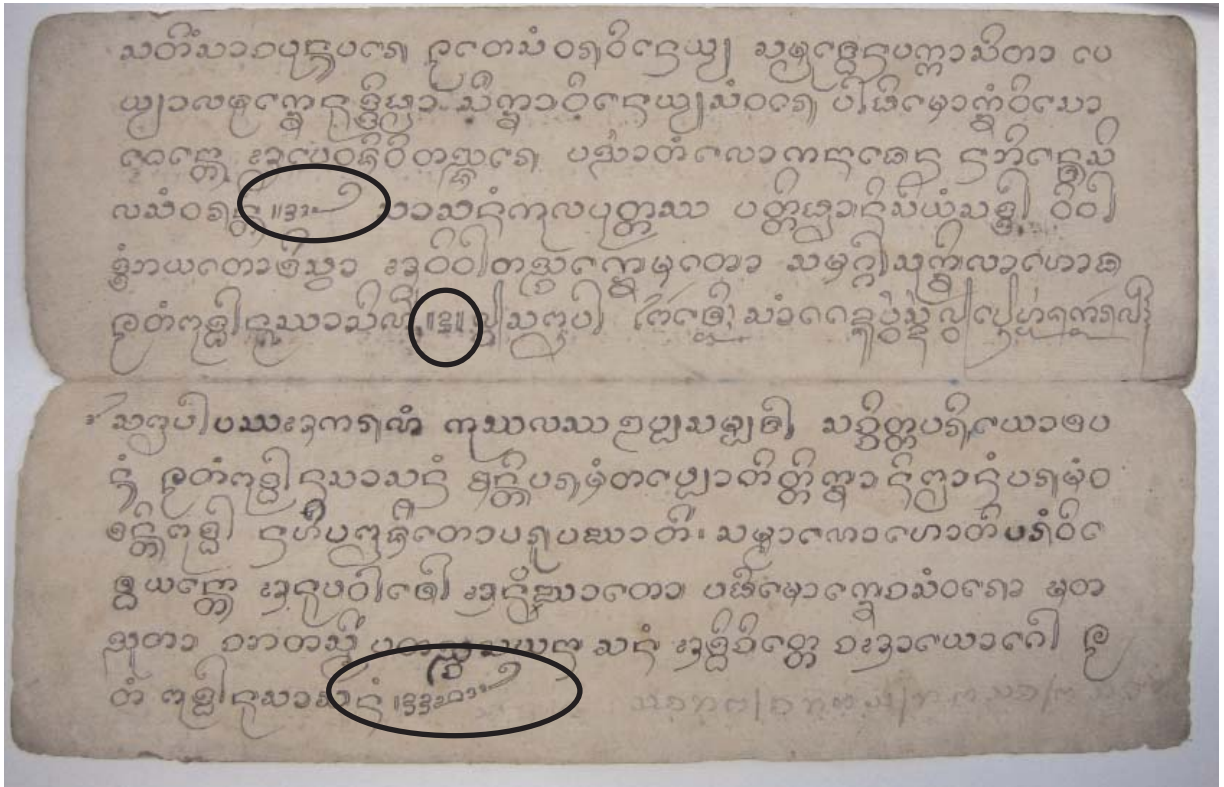

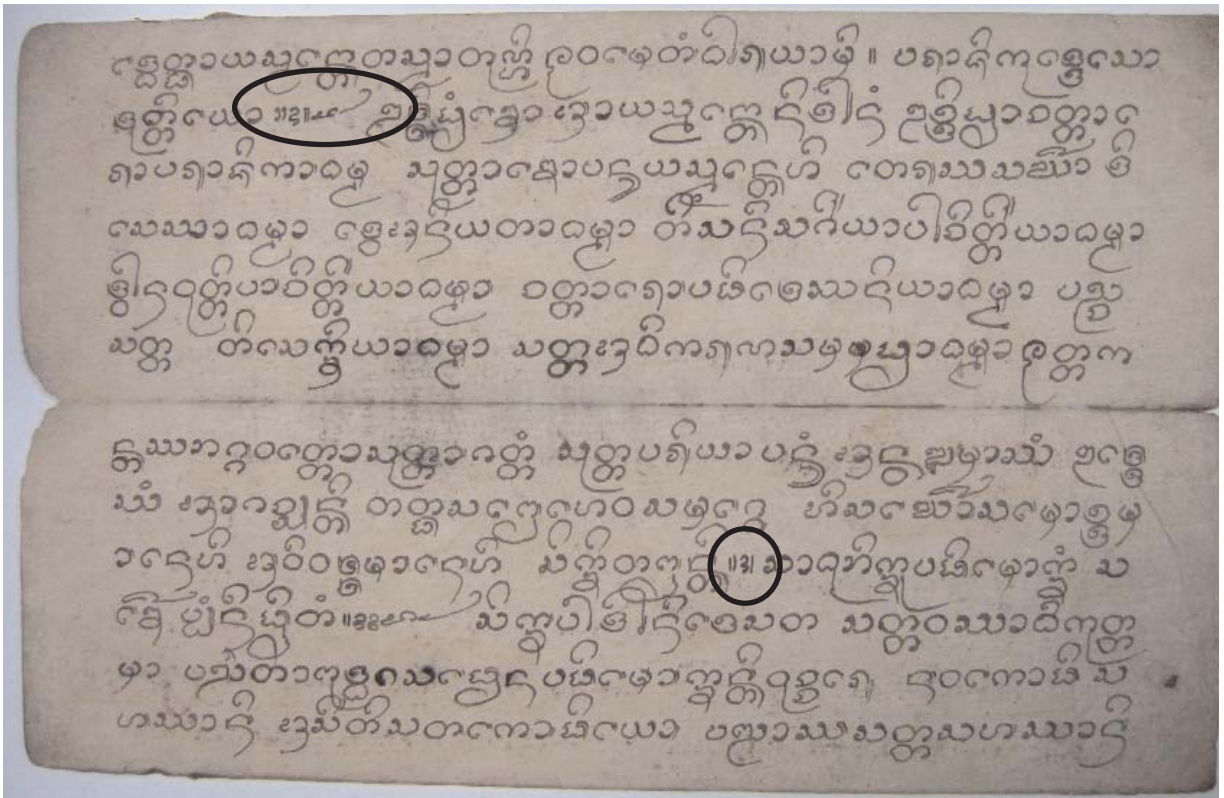

Figure 9a above and 9b below. Sample from a Northern Thai manuscript, showing a variety of marks built up out of individual punctuation marks: ||31, ||31||, ||33, ||31||, ||31.

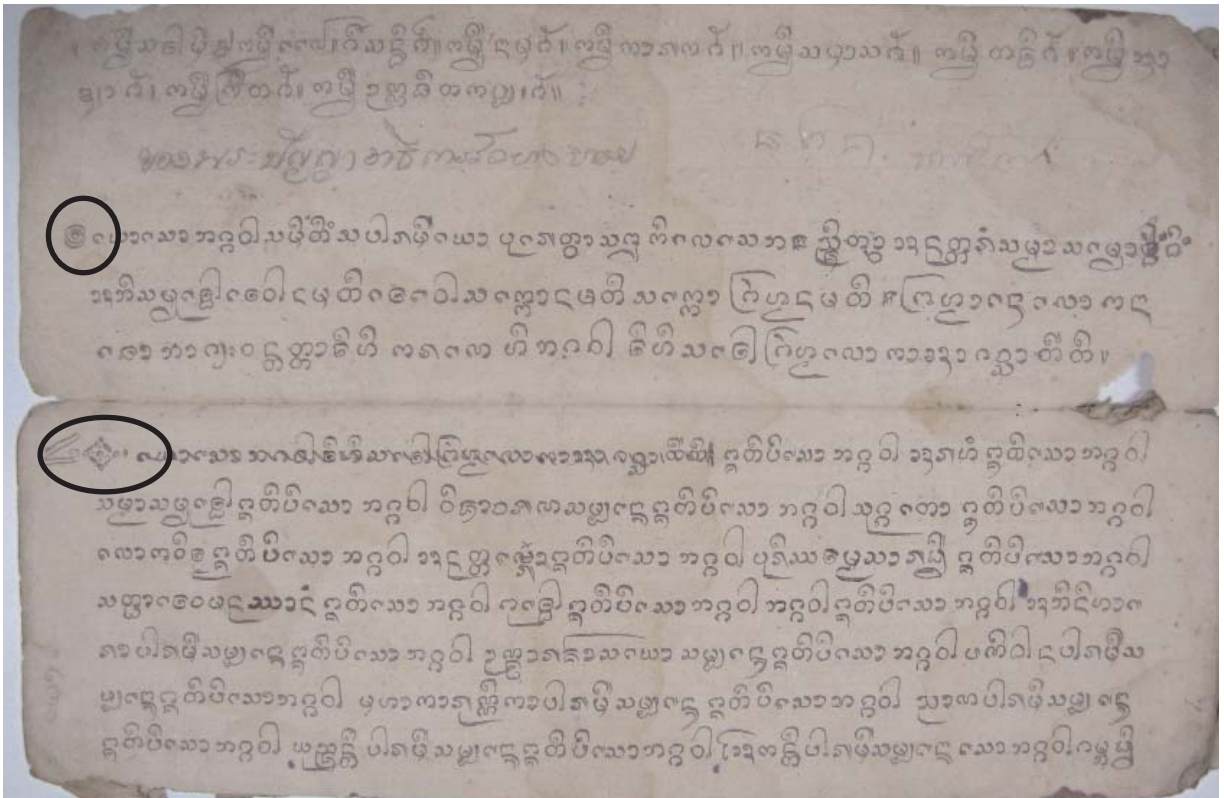

Figure 10a above and 10b below. Sample from a Northern Thai manuscript, showing a variety of marks built up out of individual punctuation marks: ๕๕, @, and ๕๕.

Figure 12. Sample from a reader in Khün. Note that in the circled example, the sequence is 1A44 ရ RA + 1A62 ဝ MAI SAT + 1A60 ဝ SAKOT + 1A30 ဗ RATA + 1A5E HIGH RATHA OR LOW PA ဖြ = ဖြ; it is not 1A44 ရ RA + 1A62 ဝ MAI SAT + 1A60 ဝ SAKOT + 1A31 ဖြ HIGH RATHA (= *ဖြ) since U+1A31 is not used in Khün.

A. Administrative

1. Title

Revised proposal for encoding the Lanna script in the UCS.

2. Requester's name

UC Berkeley Script Encoding Initiative (Universal Scripts Project); authors: Michael Everson, Martin Hosken, and Peter Constable

3. Requester type (Member body/Liaison/Individual contribution)

Liaison contribution.

4. Submission date

2007-03-21

5. Requester's reference (if applicable)

6. Choose one of the following:

6a. This is a complete proposal

Yes.

6b. More information will be provided later

No.

B. Technical – General

1. Choose one of the following:

1a. This proposal is for a new script (set of characters)

Yes.

1b. Proposed name of script

Lanna.

1c. The proposal is for addition of character(s) to an existing block

No.

1d. Name of the existing block

2. Number of characters in proposal

127

3. Proposed category (A-Contemporary; B.1-Specialized (small collection); B.2-Specialized (large collection); C-Major extinct; D-Attested extinct; E-Minor extinct; F-Archaic Hieroglyphic or Ideographic; G-Obscure or questionable usage symbols)

Category A.

4a. Proposed Level of Implementation (1, 2 or 3)

Level 2

4b. Is a rationale provided for the choice?

Yes.

4c. If YES, reference

Lanna requires Level 2 implementation as other Brahmic scripts do.

5a. Is a repertoire including character names provided?

Yes.

5b. If YES, are the names in accordance with the “character naming guidelines” in Annex L of P&P document?

Yes.

5c. Are the character shapes attached in a legible form suitable for review?

Yes.

6a. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard?

Michael Everson.

6b. If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

Michael Everson, Fontographer.

7a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?

Yes.

7b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?

Yes.

8. Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?

Yes.

9. Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database <http://www.unicode.org/Public/UNIDATA/UnicodeCharacterDatabase.html> and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

See above.

C. Technical – Justification

1. Has this proposal for addition of character(s) been submitted before? If YES, explain.

Yes. See N2042 and N1013.

2a. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?

Yes.

2b. If YES, with whom?

A. Boonkit Wacharasat (Chiang Mai), A. Manop Tanyo (Chiang Mai), Richard Wordingham

2c. If YES, available relevant documents

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?

Lanna is used in eastern Myanmar, northern Thailand, and southern China.

4a. The context of use for the proposed characters (type of use; common or rare)

Used to write the Khün, Northern Thai, and Tai Lue languages, as well as Pali and Sanskrit.

4b. Reference

5a. Are the proposed characters in current use by the user community?

Yes.

5b. If YES, where?

In eastern Myanmar, northern Thailand, and southern China.

6a. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP?

Yes. Positions 1A20-1AAF are proposed.

6b. If YES, is a rationale provided?

Yes.

6c. If YES, reference

Contemporary use and accordance with the Roadmap.

7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?

Yes.

8a. Can any of the proposed characters be considered a presentation form of an existing character or character sequence?

No.

8b. If YES, is a rationale for its inclusion provided?

8c. If YES, reference

9a. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?

Yes.

9b. If YES, is a rationale for its inclusion provided?

Yes.

9c. If YES, reference

See page 4 above.

10a. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character?

Yes, but only superficially so.

10b. If YES, is a rationale for its inclusion provided?

Yes.

10c. If YES, reference

Similarities with other related scripts are to be expected but disunification is as per normal.

11a. Does the proposal include use of combining characters and/or use of composite sequences (see clauses 4.12 and 4.14 in ISO/IEC 10646-1: 2000)?

Yes.

11b. If YES, is a rationale for such use provided?

Yes.

11c. If YES, reference

Brahmic vowels.

11d. Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?

No.

11e. If YES, reference

12a. Does the proposal contain characters with any special properties such as control function or similar semantics?

No.

12b. If YES, describe in detail (include attachment if necessary)

13a. Does the proposal contain any Ideographic compatibility character(s)?

No.

13b. If YES, is the equivalent corresponding unified ideographic character(s) identified?
