Abstract

Due to the hybrid nature of CogSci 2023, we plan to live-stream portions of the conference and record the entire program. Recorded videos may be used for CogSci educational events, by members of the community and for the general public to view. Scientific content is still the property of the presenters, but the usage of the video is at the discretion of the Cognitive Science Society. Presenters may revoke permission to share the video at any time with written communication to the Society.
