INTRODUCTION

Sexual exploitation, especially of children, is an international epidemic. While it is difficult, given how underreported such crimes are, to arrive at accurate statistics regarding the problem, “it is estimated that approximately one million children (mainly girls) enter the multi-billion dollar commercial sex trade every year.” Although child exploitation continues to persist, and in many instances thrive, the international community has, in recent decades, become increasingly aware of and reactive to the issue. Thanks in large part to that increased focus, the root causes of sexual exploitation, especially of children, have become better understood.

While the issue is certainly an international one, spanning nearly every country on the globe and is one that transcends “cultures, geography, and time,” sexual exploitation of minors is perhaps

4 For example, according to UNICEF, the underlying causes of sexual exploitation are diverse, including “poverty, gender discrimination, war, organized crime, globalization, greed, traditions and beliefs, family dysfunction, and the drug trade[,]” among others. See Press Release, supra note 1.

5 The number of women and children who are sexually exploited for commercial reasons alone are as follows: “100,000 in the Philippines, 400,000 in India, 100,000 in Taiwan, 200,000 in Thailand, 244,000-325,000 in the United States, 100,000 in Brazil, 35,000 in West Africa, 175,000 in Eastern [and] Central Europe.” Id.
at its worst in India.\textsuperscript{6} India, the world’s second most populous country, suffers from an extremely high rate of sexual exploitation of minors.\textsuperscript{7} While there has been a significant amount of research on child sexual exploitation in India and other countries in South Asia,\textsuperscript{8} legal scholarship on specific practices within the subcontinent are significantly more limited. This paper looks to fill that void by introducing, explaining, and attempting to provide solutions to the devadasi tradition.

The devadasi\textsuperscript{9} practice is one in which low-caste\textsuperscript{10} girls, as young as five or six, are “married” to a Hindu Goddess and sexually exploited by temple patrons and higher caste individuals.\textsuperscript{11} The term devadasi is a Sanskrit word, which literally translates to “female slave of God.”\textsuperscript{12} The practice is particularly interesting, as well as difficult to combat, as it arises out of a crossroads of religion, poverty, and societal norms. In addressing the devadasi practice, this paper does the following: (i) discusses the devadasi system’s historical and cultural underpinnings; (ii) addresses the evolution of the system to the modern day; (iii) focuses on why the devadasi practice violates both domestic and international law; and (iv)...

\textsuperscript{9} It is important to note that the devadasi practice is known by different names in different places. For example, devadasis are known as Muralis in Maharashtra, Basavis and Muralis in Andhra Pradesh, and Jogatis and Basavis in Karnataka. For the purposes of this paper, I refer to this collective group as devadasis.

\textsuperscript{10} The girls are usually of Dalits, a term used to refer to the lowest of the four castes in India. As is discussed in more detail in the following sections of this paper, Dalits are usually confined to certain jobs in Indian society and often face intense discrimination. As such, many women in that caste are either forced, as in the case of the devadasis, or choose to become part of the sex trade. See \textit{Who are Dalits?}, Navsaran.org, http://navsaran.org/ navsaran/dalits/whoaredalits (last visited Sept. 29, 2014).

explains what judges can do, given India’s current focus on sexual crimes and exploitation in the wake of the 2012 Delhi tragedies, to truly combat the devadasi practice.

I. THE HISTORICAL DEVADASI SYSTEM

The historical account of the devadasi system is murky due to its early inception. The first confirmed reference to a devadasi was during the Keshari Dynasty in the 6th century A.D. in South India. The practice began when one of the great queens of the Dynasty decided that in order to honor the gods, certain women who were trained in classical dancing, should be married to the deities. The inception of the practice was one that was imbued with great respect as the women whom were chosen to become devadasi were subject to two great honors: first, because they were literally married to the deity, they were to be treated as if they were the Goddess Lakshmi herself, and second, the women were honored because they were considered to be “those great women who [could] control natural human impulses, their five senses and [could] submit themselves completely to God.” As they were married to an immortal, the women were considered to be auspicious. Their main duties, in addition to committing to a life without marriage, were to take care of a temple and learn classical Indian dances, usually

At the same time, other experts argue that the institution is “far older, and claim that what is arguably one of the most ancient extant pieces of Indian art, a small bronze of a naked dancing girl from Mohenjo-daro, dating to around 2500 B.C., could depict a devadasi.” See William Dalrymple, Serving The Goddess: The Dangerous Life of a Sacred Sex Worker, The New Yorker (Aug. 4, 2008), http://www.newyorker.com/reporting/2008/08/04/080804fa_fact_dalrymple?currentPage=all.

the bharatnatyam, which they would perform at temple rituals.\textsuperscript{18} Patrons were considered to have higher status for their ability to financially sponsor devadasis.\textsuperscript{19}

The esteemed status of the devadasis began to wane under Islamic and British rule. Following their successful invasion of North India,\textsuperscript{20} Islamic rulers began to destroy Hindu temples throughout the region.\textsuperscript{21} Once the Hindu temples in the northern part of the subcontinent were destroyed, the devadasis, who were effectively tied to the temples, were left to fend for themselves. With the destruction of the temples, devadasis lost not only their patronage, but also their status in society, leading to the beginnings of their exploitation.\textsuperscript{22} The result of the loss of patronage forced the devadasis, who previously danced at religious temple events, to dance at “wedding feasts or other private entertainments. Dancing and prostitution [became] inseparable in India [at this time].”\textsuperscript{23} The system was further limited under British rule, which unlike the Islamic Empire reached the entirety of the subcontinent.\textsuperscript{24} Although academics dispute what the British thought about the custom specifically, many argue that the British reformists sought to distinguish the practice from religious and traditional customs.\textsuperscript{25} Regardless of their view on the practice, the British hierarchy displaced patrons and rulers who were supportive of the traditional devadasi system,

Another argument is that following the death of Aurangzeb, one of the most infamous Islamic rulers, the “anarchical period” that followed “became notorious because the standard of morality among the princes and public men sank to the lowest level[,]” which led to an increase in prostitution among the devadasis. leading to the continued marginalization, and thus exploitation, of the devadasi group.26

II. THE DEVADASI PRACTICE IN THE MODERN DAY

The modern iteration of the devadasi system, while not nearly as pervasive both in terms of influence and sheer numbers as in the past, is one that continues to promote the sexual exploitation of lower caste girls in India. The system is also, especially in its current form, inextricably linked to poverty and tradition. This section addresses three issues: first, how many devadasis there are in India today; second, what the practice currently looks like; and third, why girls are still being inducted into the devadasi system.

A. How many Devadasis are there in India today?

Given the disintegration of the devadasi system during Islamic and British rule, both the absolute number and geographic distribution of devadasis has become limited. Nevertheless, according to the Indian National Commission for Women (“NCW”), there are still at least 44,000 active devadasis in India, with the NCW noting that the number could in fact be as high as 250,000.27 Although the numbers are difficult to confirm due to the practice being not only underground but also difficult to differentiate from non-religious prostitution, the practice is particularly concentrated in a few states. According to the NCW, the majority of active devadasis are in Karnataka (22,491 individuals), Andhra Pradesh (16,624 individuals), and Maharashtra (2,479 individuals).28

While the geographic concentration of the institution may appear to indicate that the tradition is failing elsewhere, the problem continues to be a national one, as many girls are trafficked from different parts of the country to become devadasis. In 2010, the International Labor Organization’s29 Committee of Experts during

The larger figure is supported by other sources also. 29 The International Labour Organization (“ILO”) is a notable player in the labor-related human rights realm. The ILO is one of the chief organizations that works on behalf of laborers, including migrant workers, on the international stage. It has adopted nearly 190 international conventions, which upon adoption, are held to be international labor standards. The ILO also boasts one
an extensive study on labor rights in India, noted that the “devadasi
system was linked to the practice of trafficking girls for commercial exploitation…”30 Other media outlets have also found that many devadasis, along with other prostitutes, “are trafficked to the red light districts of Mumbai, Pune, Bangalore and other large cit-
ies.”31 As such, despite not being at its numerical historical peak, the devadasi practice continues to persist in India, even thriving in select states.

B. What does the practice look like today?
The modern iteration of the devadasi practice is significantly
different from the historic institution, in terms of both its physical
manifestation and underlying goals. Although the practice today
is still about honoring a deity, in most cases Yellamma,32 the sim-
ilarities between the historic and modern institution effectively
end there. In its current form, the practice is not as much about
temple worship or temple dancing; rather, it is almost singularly re-
lated to the sex trade, prostitution, and exploitation of the lower
caste. The difference between the devadasis of the past and those
of today, is perhaps best summarized by William Dalrymple of The
New Yorker:

There is . . . an almost unimaginable gulf separating the
devadasis of ancient poems and inscriptions and the
lives lived by women [today]. In the Middle Ages, the
devadasis were drawn from the grandest families in the
realm—among them princesses of the Chola royal fam-
ily—and possibly from slaves captured in war. Many

were literate, and some were highly accomplished poets; indeed, at the time they seem to have been among the few literate women in the region. Today, the devadasis are drawn exclusively from the lowest castes—usually from the Dalit Madar caste—and are almost entirely illiterate. The majority of modern devadasis in Karnataka are straightforward sex workers. . . .

Despite the practice’s honorable past, the devadasi system has devolved into institutionalized sexual exploitation of the poorest segments of Indian society.

At the same time, it is important to note that the practice is not exactly the same as a conventional system of sex workers. The notable difference is the fact that many devadasis are forced into the lifestyle at an extremely young age due to a combination of religion and social beliefs. The devadasi tradition is singular due to the strength of the relationship between religious beliefs and sexual exploitation. Indeed, every year there are still thousands of girls between the ages of five and ten who are dedicated to the Goddess Yellamma. Chandra, a devadasi who was interviewed by the Wall Street Journal, noted that “[f]or the first pattam [the tying of the beads before the goddess], the girl is usually between six and thirteen. But the second pattam [the night of the girl virgin] takes place after a girl’s first menses...” The religious and societal undertones of the devadasi practice, despite its real-life manifestations, set the system apart from other such institutions, both in terms of the support the tradition receives from the community and the blind-eye it receives from law enforcement.

C. Why does the system persist?

The devadasi system, despite not being as widespread as it once was, continues to thrive in many parts of Western and Southern India. A combination of religious pressure, economic necessity, and social construction form the basis of the devadasi institution and perpetuates its survival.

33 Dalrymple, supra note 14.
34 In writing this piece, I had the privilege of speaking with The Honorable Virginia M. Kendall of the Northern District of Illinois on this issue. Given her expertise on issues of child and sexual exploitation, I asked her if she could think of another example of a sexual exploitation tradition that was so closely tied with religion, and she could not.
35 Dalrymple, supra note 14.
1. Religious endorsement of the institution

There are at least three religious reasons that the institution continues to thrive. First, many who perpetuate the devadasi system believe that the younger a girl is dedicated, the more the Goddess will bless her and her family. Given that devadasis are usually only taken from the lowest caste, many of the women who are dedicated to the Goddess believe that the only way that they can lead a blessed life is to marry the deity directly. Second, many girls who willingly enter, or are forced to enter, the devadasi system view it as their only way to rise in India’s rigid caste system. The caste system dictates not only the relationship between any two people, but also limits the ability of one person to move above one’s birth caste. Many devadasis and their families view marrying the deity as a way to rise in the otherwise strict caste system. This view is not entirely without support as many in and around the practice have noted that the devadasis are respected, “regarded as auspicious,” and even called “to upper-caste weddings to give [their] blessing”—all events that would normally be impossible for a lower-caste individual. Third, and perhaps most worrying, is that many Hindu priests seem to actively condone the practice. According to India's Human Rights Commission, there is a prevalent belief that “offering something to the deity [is] rewarded bountifully.” The report states that when individuals went to the temples with problems “such as bad health, poverty, barrenness, etc., the priests often interpreted these problems as the wrath of the deity and suggested that they should offer one of their daughters to the service of the deity.” Given that the physical manifestation of Hinduism, i.e., the priests themselves, perpetuate the system, it is unsurprising that the system continues to thrive.

2. Economic necessity

As lower-caste individuals, most potential devadasis have the choice of either entering the practice or taking part in a distinct number of menial occupations or “unclean work—work that involves physical contact with blood, excrement, and other ‘defilements as

37 See Lee, supra note 11, at 8 (“The tie between the caste system and forced prostitution has been proven by the exceedingly high percentage of prostitutes from the lower castes. The devadasi practice merely bestows a religious sanction or justification to this tie.”).

41 Id.
defined by Hindu law.”

Given the fact that most of these jobs do not pay enough to sustain an individual, much less an extended family, many families pressure their young daughters to become devadasi. Indeed, the economic incentive is a strong one. As one devadasi noted, even though her job is insecure and dangerous, she has been able to “earn two hundred to three hundred rupees from a single client[,]” which has allowed her to look after and marry off her sister, provide for her mother and son, and own land, the latter of which is a rarity for lower-caste individuals. Although these benefits may appear to be good for the women involved, the sobering fact is that once a member of the devadasi is no longer able to earn money, her family usually either refuses to, or is unable to provide for her as she once provided for them.

3. Societal pressure

There are a number of social beliefs within Indian society that perpetuate the devadasi practice. For example, many landowners, who almost always are from a higher caste, believe that it is prestigious to deflower as many young girls as possible. Compounding this problem is the fact that many within Indian society believe that intercourse with a young girl is a panacea for disease. The effect of custom cannot be overstated: according to a survey that was carried out by the Joint Women’s Programme, Bangalore, over 63.6 percent of “young girls were forced into the Devadasi system due to custom, while 38 per cent reported that their families had a history of Devadasi’s.”

Another social ill that leads to the continued existence of the system is that much of the society that surrounds the devadasi

47 Id. This point is particularly interesting for two reasons. First, many women within the practice also believe that by having sex with a client, they pass their HIV/AIDS to that client thus curing themselves. Id. Second, this idea of virginal sex acting as a panacea for venereal disease is one that exists in other parts of the globe, in particular in Africa. practice is woefully ignorant of the law banning the practice. The following section addresses what those laws, both domestic and international, are and how they are applied to the practice.

III. THE DEVADASI SYSTEM AND ITS INTERACTION WITH DOMESTIC AND INTERNATIONAL LAW

The devadasi system is in violation of both Indian and international law. This section first discusses India’s efforts to outlaw the practice followed by an analysis of India’s obligations under international law.

A. Indian Domestic Law and the Devadasi System

The Indian Government effectively outlawed the devadasi practice in 1924 when it made dedication of girls for the purpose of prostitution illegal. Since then various states in India, particularly those in the South, have passed various prohibitions targeted specifically at the devadasi system. The first of the targeted regulations was the Bombay Devadasi Protection Act (“Bombay Act”), which was passed in 1934. The Bombay Act declared that the practice was illegal, irrespective of whether the girl was dedicated with or without her consent. Similar regional prohibitions were enacted in other parts of South India throughout the twentieth century, including the Madras Devadasi (Prevention of Dedication) Act of 1947, the Karnataka Devadasis (Prohibition of Dedication) Act of 1982, the Andra Pradesh Devadasis (Prohibition of Dedication) Act of 1988, and, most recently, the Maharashtra Devadasi (Abolition of Dedication) Bill of 2005. Based on these Acts, the devadasi practice is effectively outlawed throughout the entire country, with laws specifically targeted at parts of the country where the devadasi practice continues to thrive.

49 See Lee, supra note 11, at 23 (“Inadequate incentives coupled with ignorance of the Acts prohibiting the devadasi practice have resulted in passivity in governmental action at the law enforcement level.”).

50 Sections 372 and 373 of the Indian Penal Code were amended to declare “the practice of dedicating girls for the ultimate purpose of engaging them in prostitution as illegal.” Anil Chawla, Devadasis—Sinners or Sinned Against: An Attempt to Look at The Myth And Reality of History And Present Status of Devadasis, SAMARTHBHARAT 1, 25 (2002), http://www.samarthbharat.com/files/devadasihistory.pdf.

52 See Chawla, supra note 50.

53 Id. at 25-26. See also Lee, supra note 11, at 10-11 (providing a summary of the Maharashtra Devadasi Act).
Despite these numerous prohibitions, the application of Indian domestic law has been lacking due to both underreporting and the underground nature of the practice. In 1990, the Indian Supreme Court in *Vishal Jeet vs. Union of India And Ors*, noted that “[i]n spite of the [] stringent and rehabilitative provisions of law under various Acts, it cannot be said that the desired results had been achieved” and called for evaluation of the existing measures by both the central and state governments. Since that case, there have been a number of court cases and petitions in which both the Indian Supreme Court and other courts, notably the High Court of Mumbai, handed down rulings and decrees against the devadasi practice. Most recently, on February 13, 2014, in what is being hailed as an important victory for advocates of women’s rights, the Supreme Court directed the Karnataka Chief Secretary to “take all steps to prevent women from being forced to become ‘devadasi’ at a temple function” at the Uttarang Mala Durga temple in Karnataka.

B. International Law Prohibitions

The devadasi practice violates not only domestic laws, but also a wide range of international conventions and laws. In particular, the practice stands in stark violation of the Universal Declaration of Human Rights (“UDHR”), the International Covenant on Civil and Political Rights, International Covenant on Economic, Social and Cultural Rights, Convention on the Elimination of All Forms of Discrimination Against Women, Convention on the Elimination of

---

Rights of the Child, and Optional Protocol to the Convention on the Rights of the Child on the Sale of Children, Child Prostitution and Child Pornography. Notably, India is a state party to each of these conventions and protocols, indicating that the country as a whole is working towards putting an end to the practice. Chief among these protections are prohibitions against forced marriage and the trafficking of individuals, particularly children and women, as well as the obligation to assure children a decent life.

Despite the existence of numerous international prohibitions, there are at least three issues with the application of international law to the devadasi practice. First, many of the aforementioned treaties and conventions do not have enforcement mechanisms for the hearing of individual complaints. For example, the UDHR, which was not originally meant to be per se binding, lacks any enforcement mechanism, which limits its practical applicability. As such, despite India’s many international commitments, it is unlikely that the international community, or even individuals within India, will be able to hold the country accountable in an international forum. Second, given that the practice is entirely domestic, the international community must rely on Indian domestic courts to apply international law to the devadasi institution. Unfortunately, India suffers from a serious lack of enforcement of such laws. Third, similar to the failure of domestic law, the underground nature of the devadasi system makes application of international law extremely difficult.

63 This paper does not go into detail about the different subsections of each convention and how they can be applied to the devadasi practice. For a good summary of such application, see Lee, supra note 11, at 14-19; see also Bina B. Hanchinamani, Human Rights Abuses of Dalits in India, 8 HUM. RTS. BRIEF 15, 19, 29 (2001). Rather, this paper focuses on why international law’s prohibitions have failed.
64 See S.N. Al Habsy & Kishor Uprety, Cooperation For Nominal Development Or Politics For Actual Survival? South Asia In The Making Of International Law, 12 J. TRANSNAT’L L. & POL’Y 19, 65 n. 342 (2002) (stating that in terms of human trafficking laws, “[e]nforcement of laws is crucial. Indeed, in countries like India, Nepal, and Pakistan, there are impressive sounding laws . . . on the books, but they are rarely enforced.”).
IV. Brighter Future? What the Law, and Judges, Can Do to Combat the Practice

The devadasi practice continues to exist despite both domestic and international law prohibiting it. As discussed, the chief reasons for its persistence are economic, religious, and societal, each of which force women to partake in the practice while also curtailing any meaningful action being taken against the tradition as a whole. While the reasons behind the perpetuation of the devadasi practice seems to have deep roots in the Indian consciousness, recent events in India indicate that the populace is beginning to push for meaningful change. This section first discusses the reason for that change in the Indian mindset. It then argues that judges can capitalize on this changing mindset and put the final nail in the devadasi practice’s coffin.

A. India’s Sexual Violence Revolution

India is in a moment of flux following the horrific 2012 Delhi rape incident. The brutality and brazenness of the crime drummed up substantial domestic and international press along with nationwide protests. The increased focus on sexual violence against young women, largely due to that event, has continued, shedding light on a number of violent rapes and sexual assaults since the 2012 incident. For example, in reaction to a particularly heinous 2014 rape and murder of a 16-year-old girl in Calcutta, thousands of

66 The 2012 incident involved a gang rape of a 23-year-old physiotherapy student on a public bus. She died of her injuries thirteen days later. Six men were arrested for the crime. One of these men committed suicide while in prison, and a second, a juvenile, was sentenced to three years of rehabilitation. See Delhi Gang Rape: Death Penalty for Two Men Put on Hold, BBC NEWS INDIA (Mar. 15, 2014), http://www.bbc.com/news/world-asia-india-26593587.

69 The girl was gang raped, filed a police report the next day, and then was raped again by the same men. The assailants then set her on fire when she refused to withdraw the police complaint. See Protests in India After Police Try to Forcibly Cremate Body of Twice Raped, Burnt 16yo Girl, RT (Jan. 2, 2014), http://rt.com/news/india-rape-protests-killed-084/.
protesters took the streets to demand more meaningful action from the government and police.\textsuperscript{70}

The frequent, unrelenting protests and media scrutiny have forced many within the Indian government to question both the vitality of the laws and their woeful application.\textsuperscript{71} Within one month of the 2012 incident, on January 23, 2013, a committee headed by Justice J.S. Verma, former Chief Justice of the Indian Supreme Court, “was constituted to recommend amendments to the Criminal Law so as to provide for quicker trial and enhanced punishment for criminals accused of committing sexual assault against women.”\textsuperscript{72} The report culminated in wide-reaching policy reform that not only required the death penalty for a number of sexual crimes, but also criminalized “eve-teasing,” which has been described as “the coy and euphemistic name for the sexual harassment—the stalking, groping and lewd comments—that every Indian woman is forced to navigate every time she walks out of her home.”\textsuperscript{73} This drastic change in policy and law reflects a change in the national mood and understanding of sexual rights of women and young girls. It is this change that judges must capitalize on.

B. How Judges Can Combat the Devadasi System

Given that Indian society is in the midst of recalibrating its morality and is moving towards stronger laws to protect young girls from their previously dangerous reality, there may be no better time for judges to put pressure on the devadasi system.\textsuperscript{74} This section discusses two steps that judges should take to combat the practice.

\textsuperscript{70} There have been a number of high profile sexual violence cases in the last couple of years. Many of these later incidents have been met with public protest.

\textsuperscript{74} This is not to say that judges have ultimate power in ending the practice. Indeed, parents, police, and politicians may in fact have more power to effect change. For example, many have argued that the most effective way to combat the practice is to increase “the awareness of the devadasis” in local villages. See Maria Costanza Torri, Abuse of Lower Castes in South India: The Institution of Devadasi, 11 J. INT’L WOMEN’S STUD. 31, 44 (2009). However, this paper focuses on the judiciary as a vehicle through which the already enacted laws can be
Applying the laws vigorously

Perhaps judges' most obvious power is to ensure that the law, as laid down by the legislator, is interpreted and applied in an effective manner. In the case of sexual exploitation in India, and particularly in regards to the devadasi practice, judges would do well to vigorously apply the newly created laws, which as noted above, create expedited causes of actions against those who commit or facilitate sexual exploitation. The Indian Supreme Court seems to be taking the lead on the issue by taking an active role in the prosecution of those involved in the practice. For example, the Court recently required that various officials in India, in particular the Karnataka Chief Secretary, take meaningful steps to protect young girls who are going to be dedicated to the devadasi practice. The court, in telling the Chief Secretary to enforce the law against the practice, sets a proactive standard in which the judiciary requires officials to take “all preventative measures” to ensure that the system is not perpetuated.

While this suggestion—one in which judges, and particularly lower court judges, are being told to do their job in a meaningful way—might seem plainly obvious, the fact that India’s judicial system is notoriously corrupt illustrates that such a recommendation might not be as easy to apply as it first seems. For example, while under-reporting might be the biggest problem with enforcement of the laws, even in cases where the crime is reported, police officers do little or nothing to enforce the laws. The problem is not limited to the police, but extends to a judiciary that is not only susceptible to bribes, but is also so slow and inefficient that the goal of deterrence is usually never met. If Indian judges, following the
lead of their Supreme Court, begin to apply the laws rigorously and demand palpable action from state officials, the law may begin to cause pause amongst those who perpetuate the *devadasi* system.

2. Judges Should Create Social Pressure Through Their Rulings

One of the largest obstacles facing those who want to eradicate the *devadasi* system is that there seems to be an implicit acceptance, almost in the form of an unspoken law, among those closest to the practice that allows it to perpetuate. Combatting that social acceptance is likely the first, and most important, fight for opponents of the practice.79

For their part, judges have the ability to alter society’s values based on their rulings, especially when those rulings are in line with the national will following a watershed moment, such as, the 2012 Delhi incident. Indian judges would do well to augment, through their decisions and underlying rationale, the already existing social pressure against the practice. The Indian Supreme Court, again, provides a strong exemplar. In its order to the Karnataka Chief Secretary, the Supreme Court noted that the *devadasi* tradition was a “national shame,” and required that the Karnataka government provide guidelines on how it was going to curb the practice.80 The Supreme Court, by expressing “shock over the proposed dedication of hundreds of Dalit girls as Devadasis”81 sent a clear message to not only the Karnataka government, but also to individuals in and around the practice, that social mores are changing. While it is difficult to empirically measure the effect of a judge’s opinion on societal values, the fact that numerous NGOs and governmental actors cite to such rulings is proof that they do have some significance when applied to a populace’s collective consciousness.

V. Conclusion

The *devadasi* tradition, once an institution that bestowed honor on women who were chosen to take part, has devolved into a say that the Indian judicial system does nothing more to prove “over and over the axiom that justice delayed is justice denied.” See Sankaran, *supra* note 73.79

The position that social, rather than legal, change is the most effective route is a popular one. This is particularly true given that India is wrought with corruption and that Indians have “a regrettable tendency to treat laws as mere suggestions, like worthy advice from a grandmother—to be followed in theory and ignored in practice.” See Sankaran, *supra* note 73.

system of institutionalized sexual exploitation and prostitution of young, lower-caste girls.\textsuperscript{82} Although the practice is no longer as prevalent as it once was, thanks in large part to being prohibited by both domestic and international law, thousands of girls are still dedicated to the practice on a yearly basis for economic, religious, and social reasons. Perhaps even more problematic, many of the dedicated girls do not see participation in the practice in a negative way since “[f]or the very poor, and the very pious, the devadasi system can still be seen as providing a way out of poverty while gaining access to the blessings of the gods, the two things that the most impoverished crave.”\textsuperscript{83}

Despite the continued existence of the practice, the advent of India’s sexual violence revolution is offering judges an opportunity to help ring in the death knell of the devadasi institution. In particular, this paper argues that judges should take two steps: first, ensure that the newly-enacted laws are vigorously applied, and second, use their position of influence to create social pressure to end the practice. While these solutions are not comprehensive, they are simple and effective steps that judges can take to end the devadasi practice—an institution that continues to subject thousands of girls, as young as five or six, annually to a lifetime of sexual exploitation and prostitution.
