Erratum

Erratum to “Averting the legacy of kidney disease–Focus on childhood” [Nephrol. Ther. 12 (1) (2016) 1–5]

Julie R. Ingelfinger, Kamyar Kalantar-Zadeh, Franz Schaefer, on behalf of the World Kidney Day Steering Committee*, Philip Kam Tao Li, Guillermo Garcia-Garcia, William G. Couser, Timur Erk, Julie R. Ingelfinger, Kamyar Kalantar-Zadeh, Charles Kernahan, Charlotte Osafo, Miguel C. Riella, Luca Segantini, Elena Zakharova

World Kidney Day, International Society of Nephrology, in collaboration with International Federation of Kidney Foundation, 1B, rues de Fabriques, 1000 Brussels, Belgium

Table 2

Etiology of chronic kidney disease in children.

CKD		ESRD	
Etiology	Percentage (range)	Etiology	Percentage (range)
CAKUT	48–59	CAKUT	34–43
GN	5–14	GN	15–29
HN	10–19	HN	12–22
HUS	2–6	HUS	2–6
Cystic	5–9	Cystic	6–12
Ischemic	2–4	Ischemic	2

Rare causes include congenital NS, metabolic diseases, cystinosis. Miscellaneous causes depend on how such entities are classified. CAKUT: congenital anomalies of the kidney and urinary tract; GN: glomerulonephritis; HN: hypertension; HUS: hemolytic uremic syndrome. From Harambat et al. CKD data are from NAPRTCS, the Italian Registry and the Belgian Registry. ESRD data are from ANZDATA, ESPN/ERA-EDTA, UK Renal Registry and the Japanese Registry.

Correction notice:

In proofing, the abbreviation HN was changed to hypertension. HN stands for hereditary nephropathy and should have been defined as such, when a legend was added in proofing. However, due to the change in the abbreviation to hypertension, hypertension was erroneously inserted in the legend. We apologize for this error.
