Cover: A caddisfly larva, belonging to the Hydrobiosidae family (Atopsyche sp.), sampled in a small stream in the “la Hotte” Biosphere Reserve, Haiti. Whereas, the area is well known for its high species richness and high endemism of many taxa (e.g. reptiles, amphibians), the ecology of aquatic invertebrates communities is generally poorly documented. In this issue, Cinéas & Dolédec look for the main environmental factors constraining aquatic insect species richness, distribution and endemism in the Caribbean islands. Photo by C. Cinéas.
