1. Introduction

In our paper ‘Absolute single photoionization cross-section measurements of Rb^{2+} ions: experiment and theory’ [1] a

formatting error occurred in which the data for table 8 was overwritten with values from table 5. The corrected table 8 is shown below. In the process of correcting this error, three typos were discovered in other data tables. In table 6,

Table 6. Rydberg series of resonances due to $4p \rightarrow nd$ transitions from the $^2P_{3/2}^o$ ground state of Rb^{2+} converging to the $4s^24p^4(^1D_2)$ series limit in Rb^{3+} . The coupling splitting of this series is resolved only for the two lowest-energy resonances ($n = 8$ and 9).

Initial Rb^{2+} state: $4s^24p^5(^2P_{3/2}^o)$							
$^2P_{3/2}$ Rydberg series				$^2P_{3/2}$ Rydberg series

Table 7. Rydberg series of resonances due to 4p → nd transitions from the ²P_{1/2}^o metastable state of Rb²⁺ converging to the 4s²4p⁴(¹D₂) series limit in Rb³⁺. The coupling splitting of this series is resolved only for the three lowest-energy resonances (n = 8 through 10). The feature associated with the n = 11 resonance for the lower energy splitting was not resolvable and is indistinguishable from background thus this resonance lacks a feature number.

Initial Rb ²⁺ state: 4s ² 4p ⁵ (² P _{1/2} ^o)

21	43.732	0.305	83	21	42.818	0.303	71

resonance number 24 was mistakenly listed twice. The repeated resonance number was removed and the corrected table 6 is shown. In table 7 the series limits have been replaced with the correct value of 40.485 eV as shown in the corrected table.
