UCRL-8161 ✓

SUBJECT

BEVATRON H MAGNET  
18 x 36 8" Gap

NAME L. G. Ratner ✓

DATE November 11, 1957

Magnetic measurements were made on this magnet (Assembly Drawing UCRL 9A1103) on October 31 and November 1. Flux density at the center, median plane was measured with a nuclear fluxmeter whose accuracy is of the order of  $\pm 0.02\%$ . Longitudinal and transverse profiles were measured with a Rawson-Lush rotating coil gaussmeter (rated accuracy  $\pm 1.0\%$  of full scale). The results of the longitudinal and transverse runs were plotted as a percent of central field versus position (pages 6, 7). High field runs were plotted as flux density versus position (pages 4, 5). Flux density versus magnet current is plotted on page two. The high field magnetization was plotted separately, page 3, in order to show magnet efficiency in this region.

Current and voltages were also measured and are shown in the following table.

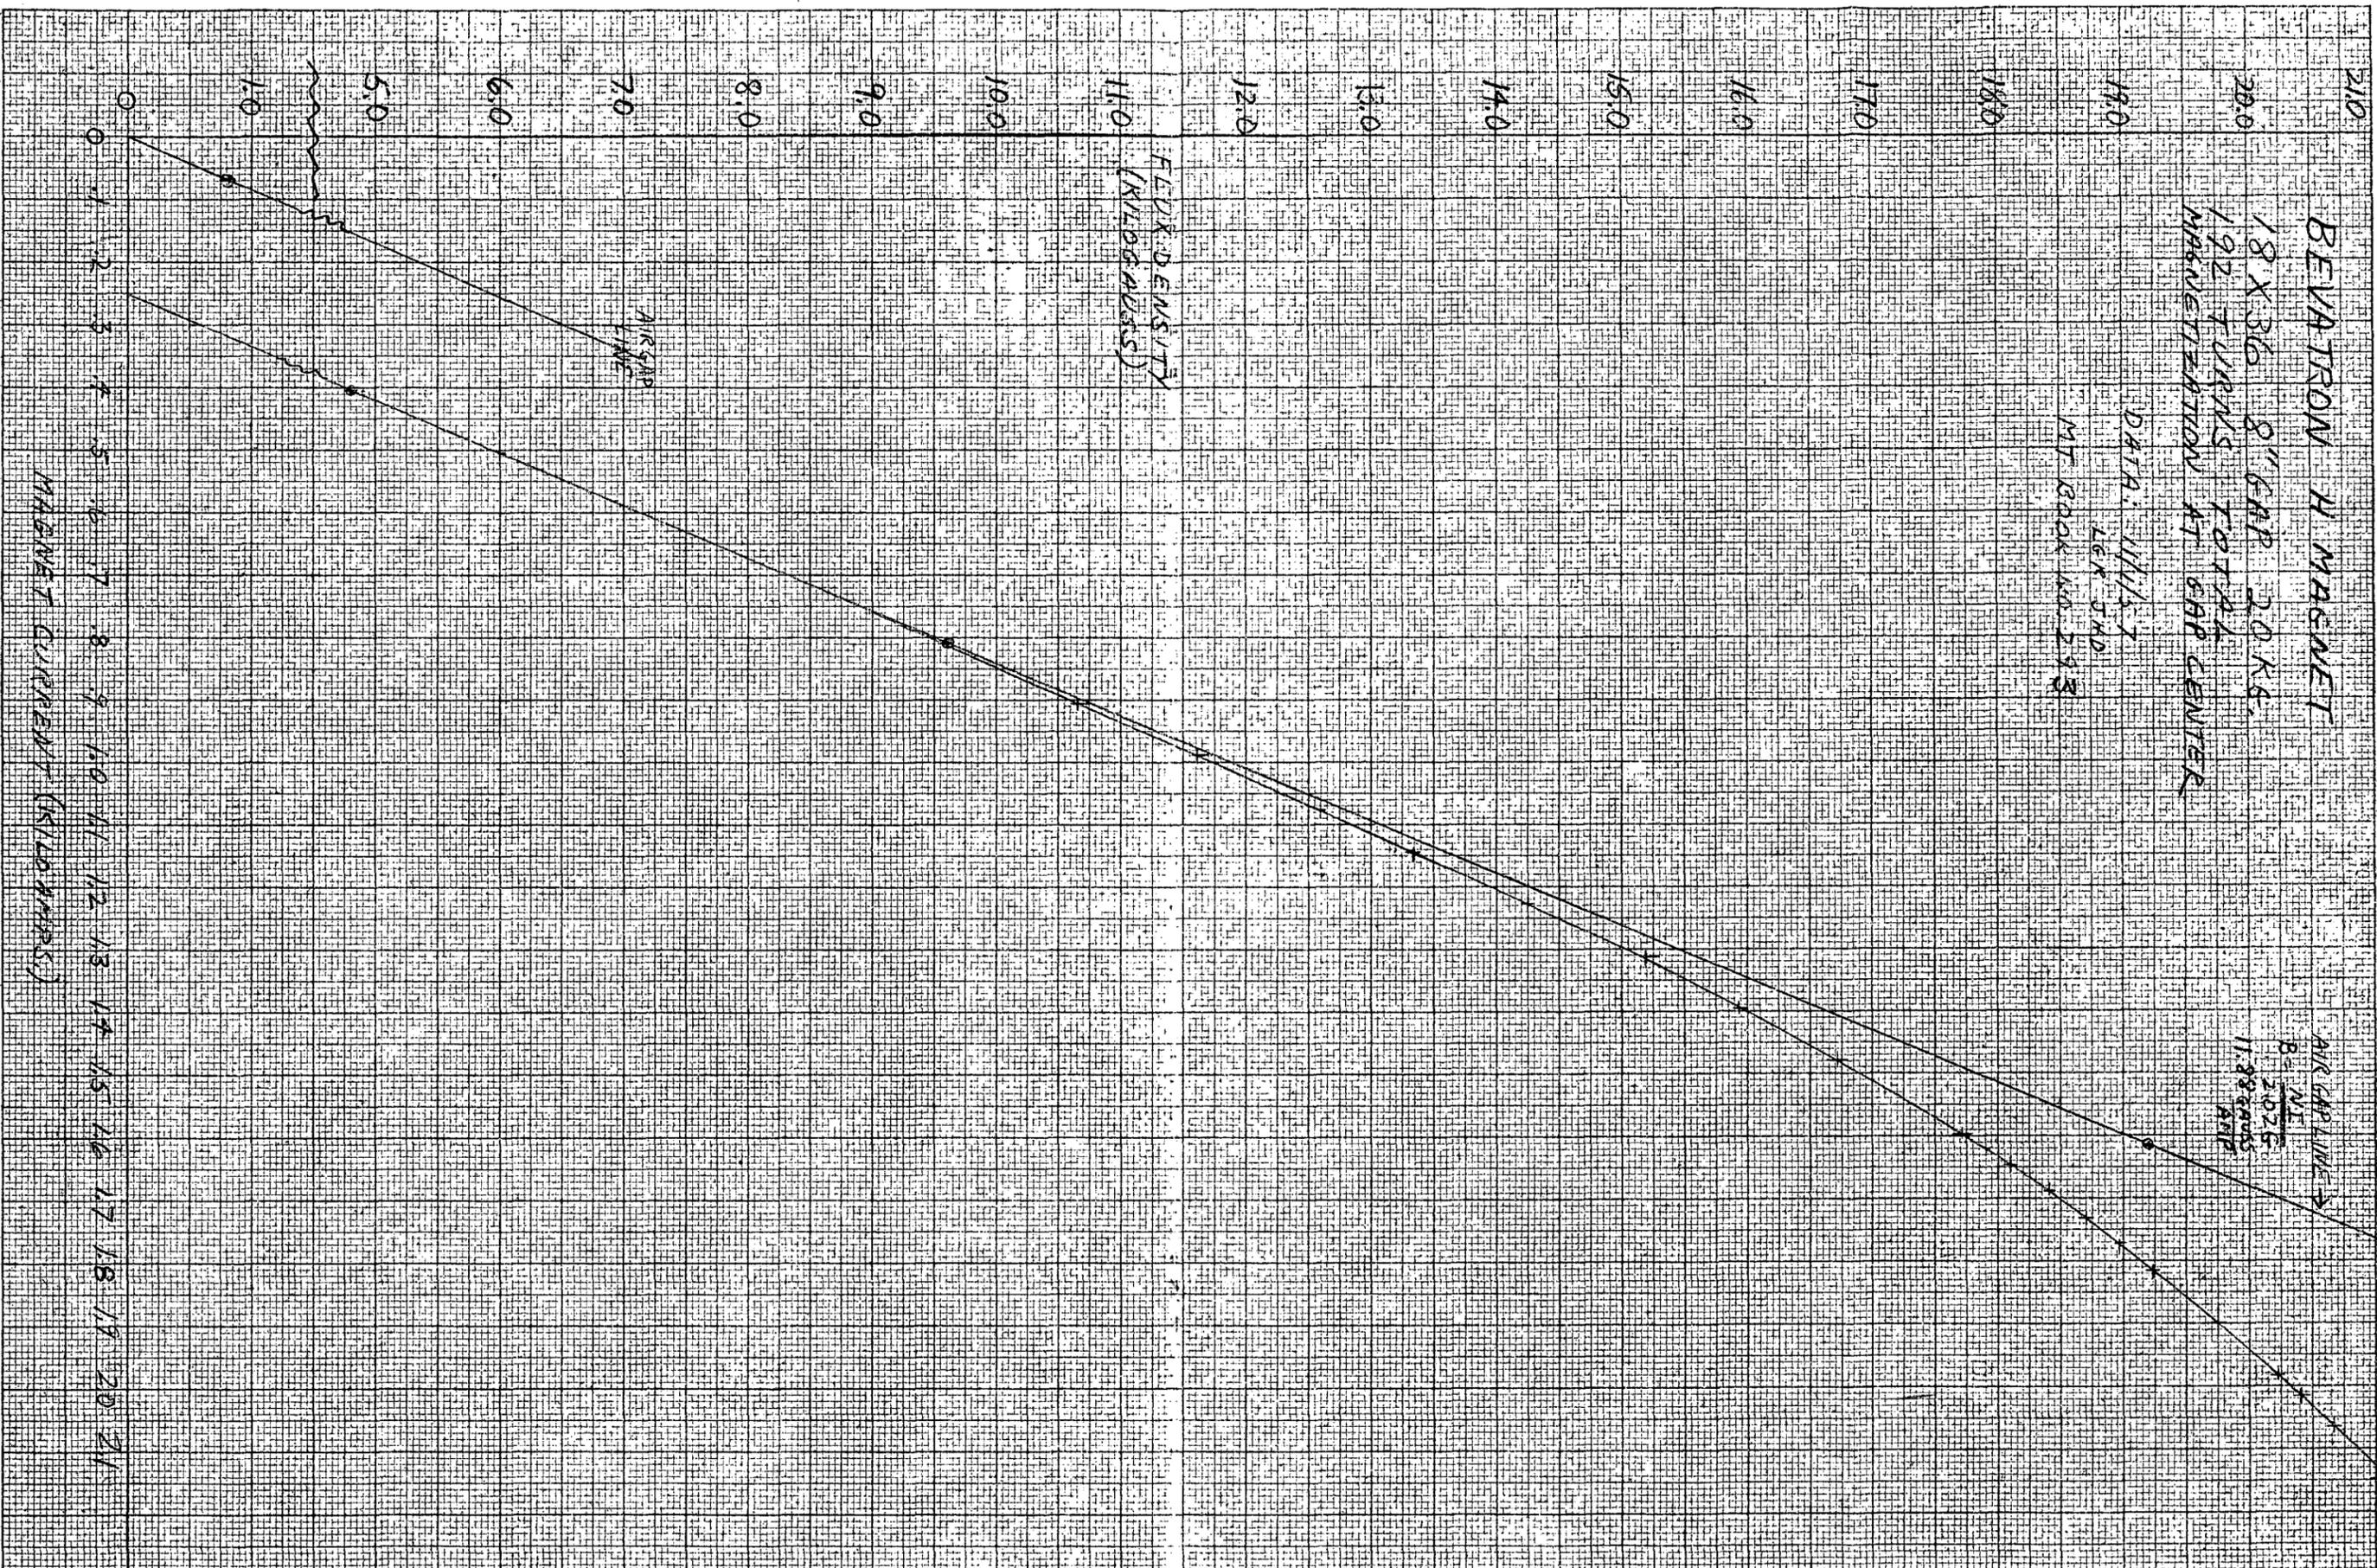

| $P_{in}$ (PSI) | $P_{out}$ (PSI) | $\Delta P$       |
|----------------|-----------------|------------------|
| 81             | 32              | 49 at flow board |
| 74             | 55              | 19 at magnet     |

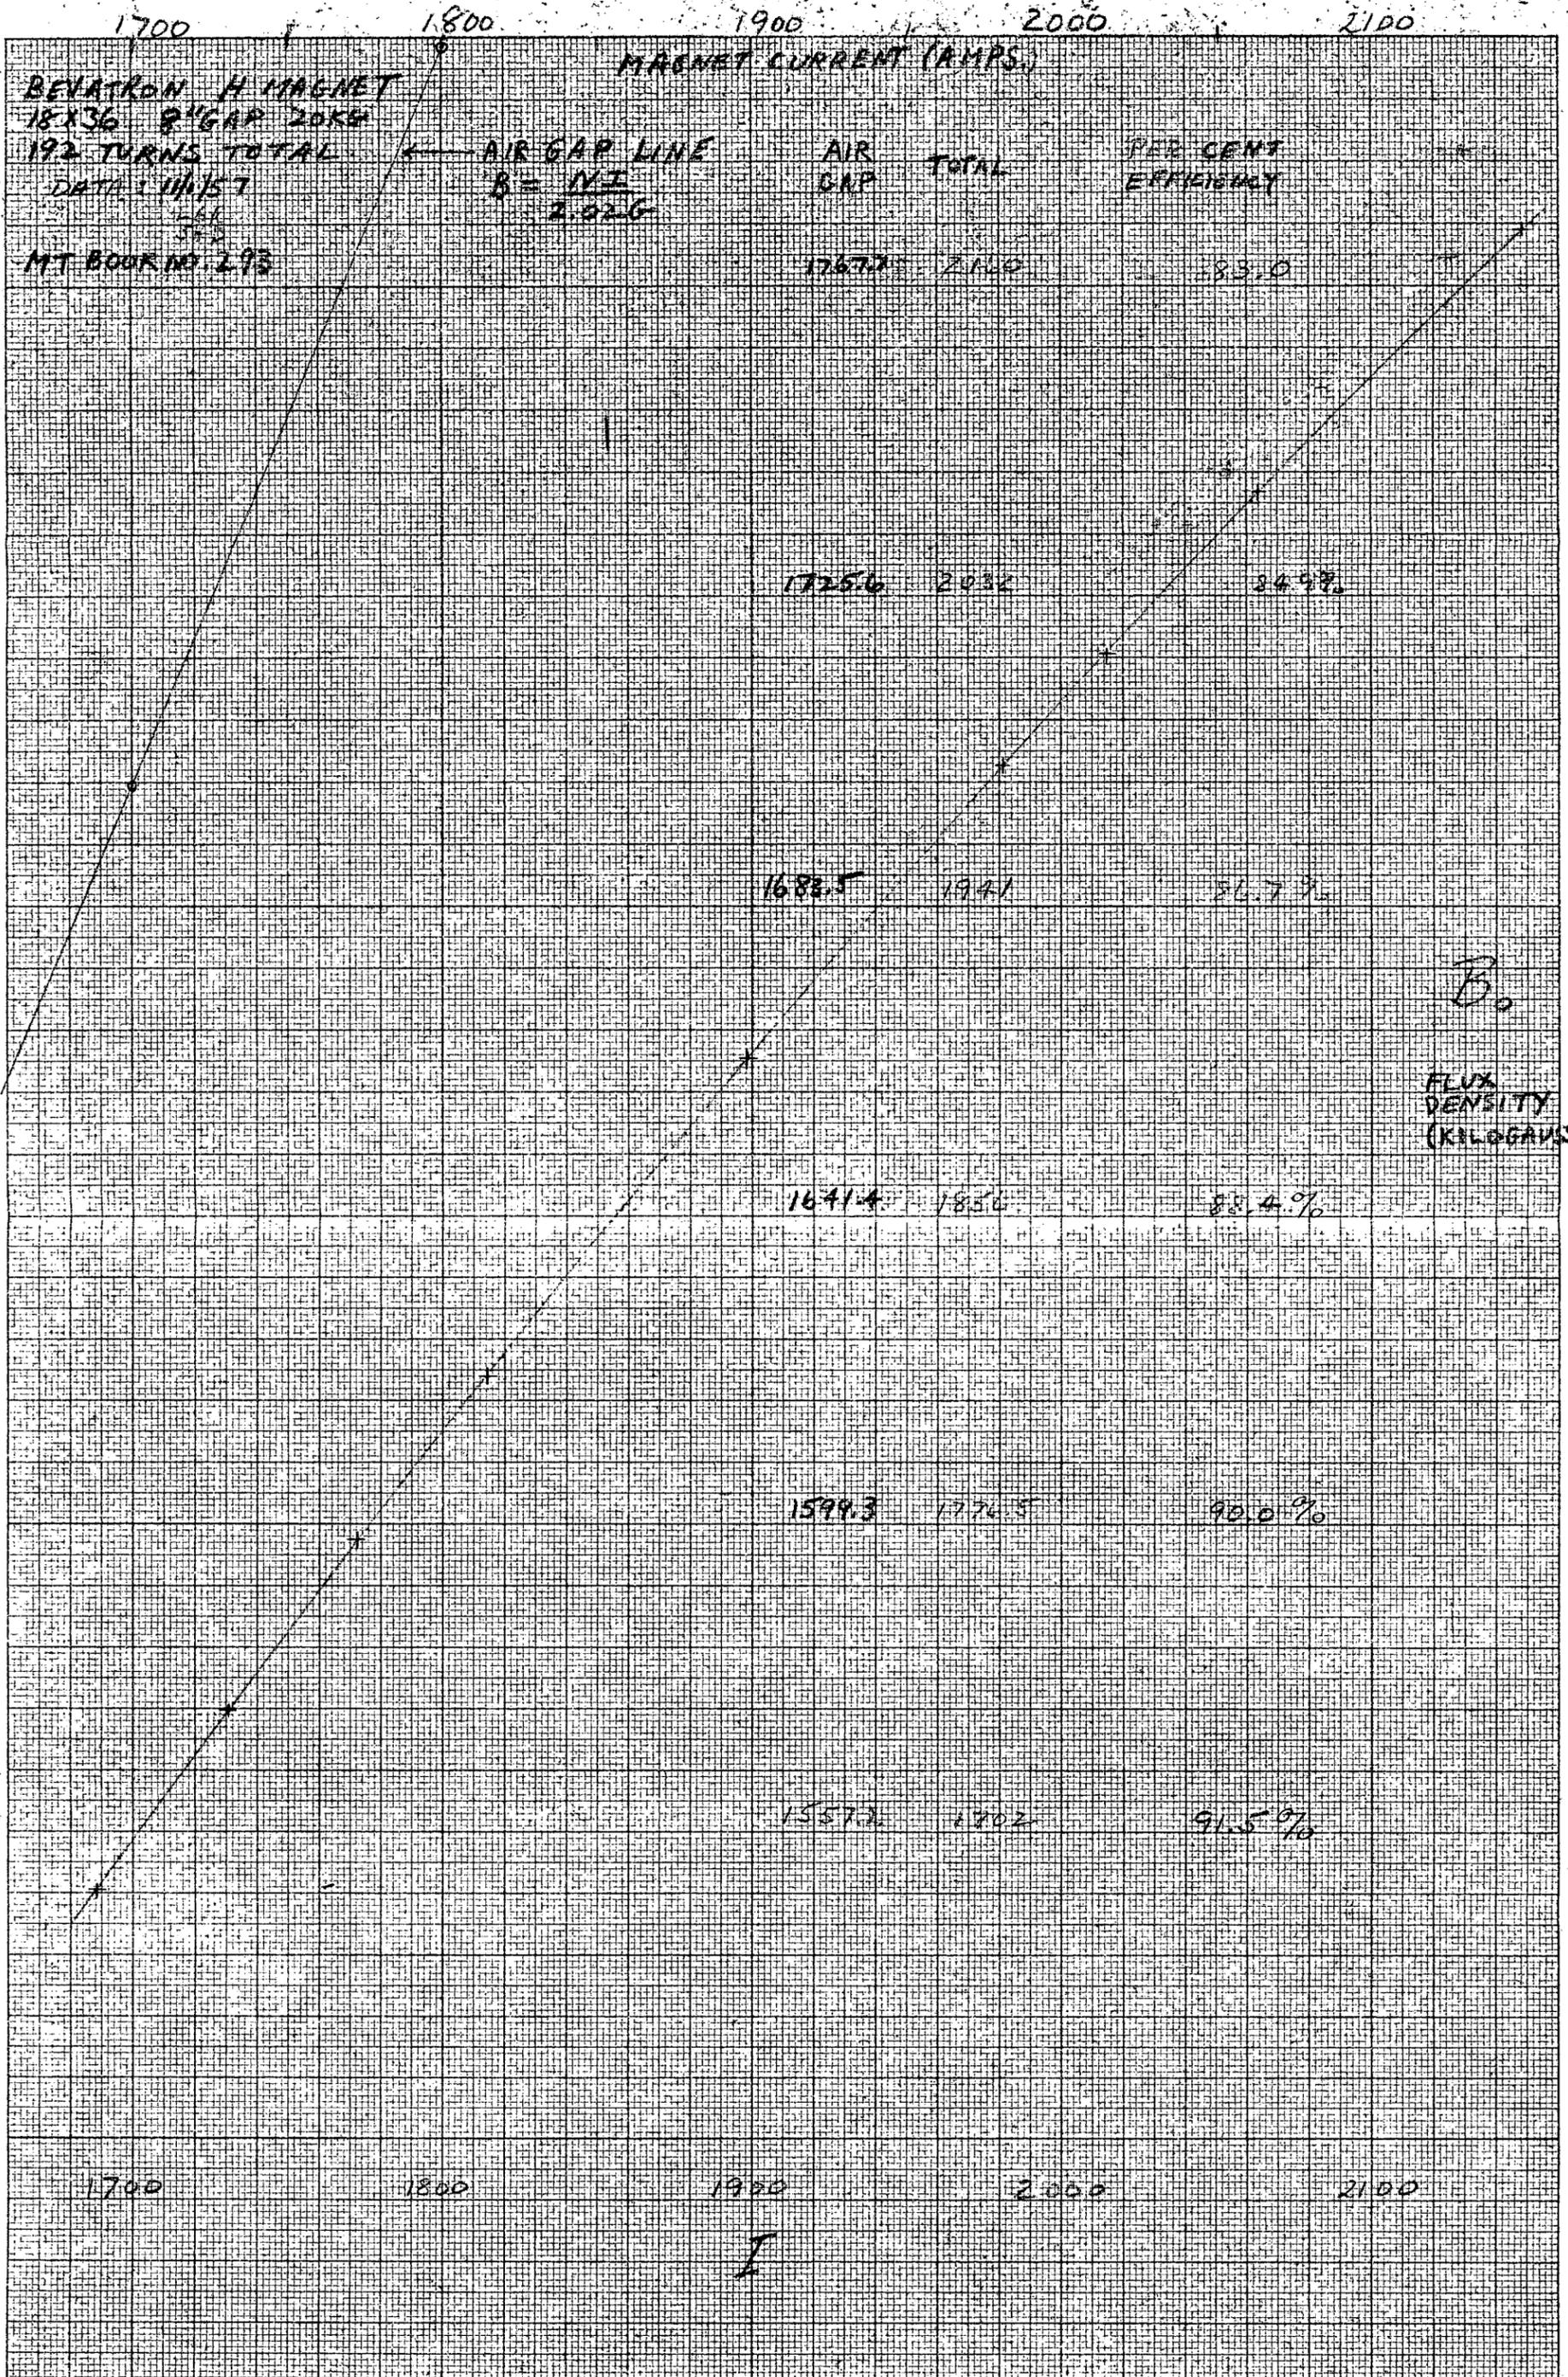

| E (volts) | I (amps) | Power (KW) |
|-----------|----------|------------|
| 24.4      | 328.6    | 8.0        |
| 69.3      | 917.6    | 63.6       |
| 82.3      | 1086.3   | 89.4       |
| 95.4      | 1252.2   | 119.5      |
| 109.1     | 1420.9   | 155.0      |
| 123.0     | 1588.8   | 195.4      |
| 137.8     | 1756.3   | 242.0      |
| 158       | 1997.2   | 315.6      |
