INTRODUCTION

This document is a list and index of engineering notes and specifications issued by the Mechanical Engineering Department of the University of California Lawrence Radiation Laboratory at Berkeley up to approximately March 15, 1963.

The publication is divided into two main sections. Section I is a listing of specifications and engineering notes arranged by number, with complete bibliographical information (author, title, and date) for each item.

Section II consists of two indexes. Part A is a subject index to the numbers under which documents have been grouped. This index provides a broad subject approach to the engineering notes and specifications listed serially in Section I. Part B of Section II provides a more specific approach. It is a "Keyword-Plus-Title" index, in which the significant, or "key" words in the titles of the engineering notes and specifications have been arranged alphabetically. In addition to the indexed key word, each entry contains the complete title and the engineering note or specification. To the right of each entry will be found the engineering note or specification number, which may be used to locate the complete citation in Section I. Part B also contains key words from the group headings in Section I. These are designated by the letters GRP.

REQUESTS FOR DOCUMENTS LISTED

Requests originating within the Laboratory should be directed to the Mechanical Engineering Department, Lawrence Radiation Laboratory, Berkeley, California.

All other requests should be directed to the Technical Information Division of the Lawrence Radiation Laboratory, Berkeley.

#### AVAILABILITY FOR OUTSIDE DISTRIBUTION

Any document for which a UCID number appears in the citation is available for distribution outside the Laboratory.

Any document for which no UCID number is given may or may not be available for distribution outside the Laboratory, depending on a variety of factors. Each requestor for such a document will be advised if it is not available for outside distribution.
