Correction to Capillary Pressure–Saturation Relations for Supercritical CO₂ and Brine in Limestone/Dolomite Sands: Implications for Geologic Carbon Sequestration in Carbonate Reservoirs

Shibo Wang and Tetsu K. Tokunaga*

Our recent publication on capillary pressure-saturation (P_c - S_w) relations in carbonate sands contained P_c values that were offset from their true equilibrium values. Original Figures 2, 3, and 4 showed nonequilibrium P_c values that were close to the intended equilibrium P_c . The modified figures using the equilibrium P_c data are shown below. Other parts of the original paper and its conclusions remain unaffected. Additional corrections to the Supporting Information are also available. We apologize for the inconvenience caused to readers.
