<shwx=>, da //sxʷ= or s=xʷ=//=, [šxʷ=], CJ /'nominalizer, something for, someone for, something that'/, <s(h)>= nominalizer, <xw>= towards, (semological comment: almost always used with continueative stems, thus the translation something for [doing X] in contrast to the translation for sx= used mostly with non-continueative something to [do X], occasionally both suffixes violate this semantic distinction and then they have the literal translation something that [does/is doing X], discovering this semantic principle has allowed the derivations of a number of words from their proper roots). Rather than cross referencing every word with this suffix under the <sh> here, the reader should look up the forms under the consonant following the <shw> as such words will be found under the root beginning with that consonant. A few sample words only are listed here under <sh>, along with those whose roots are unclear or the few words that begin with borrowed or sound symbolic <sh>.

In Harrison Lake, Indian spirit dancers with red paint are said to have different spirit powers than those with black paint, a sample of Stó:lō Indian red face paint (for spirit dancers) was obtained from Mrs. Amy Cooper by Oliver Wells, kept by the Wells family after his death, and chemically analyzed from Oct. to Nov. 1981 at Simon Fraser University for Dr. Ralph Maud, Marie Weeden and Dr. Brent Galloway in their project to transcribe the Oliver Wells tapes and inventory his Indian research materials, the analysis by Keith Slessor of S.F.U. together with graphs of three tests (see illustrations) follows: "Face Paint Analysis. X-ray analysis (Prof. John D. Auria): sample contained about 10 percent iron Fe, also contained other minor components so we suspect an iron-containing clay rather than a pure iron oxide, Microanalysis (Ms. S.A. Black): showed about 70 percent organic consistent with a grease or fat added to and mixed in with the iron-bearing clay, Fat analysis (Ms. S. A. Black and Mr. B. D. Johnston): capillary gas chromatography of the methyl ester of the fatty material showed a highly saturated fat typically of animal origin, plant and fish oil (fats) are reasonably unsaturated and I believe can be ruled out in this case., [Summary]: The face paint is probably an iron-containing clay that would be dark brown (or red brown) ground up finely in the presence of four times the volume of animal fat. [from another note dated 27/11/81]: In discussion here about the face paint, the suggestion that the animal fat origin is very likely to be black bear arose. <ts>, comment: The Stó:lô orthography uses both <ch> ([ék]) and <ts> ([ék]), for two allophones of a single Halkomelem phoneme, /c/. This has the advantage of showing phonetic preferences of the speakers which are difficult to predict purely from environments; in linguistic terms [ék] and [ék] are evolving from a state of free variation to conditioned variation (or vice versa) (see Galloway 1977:5-7 for a statement of the environments, dialects, and idiolects conditioning these two sounds). As it happens, comparatively few cases of initial <ts> [ék] occur. Therefore if a reader is looking up a word spelled or sounded with an initial ts, he should be sure to check under <ch> as well, as more speakers may pronounce it with <ch>.

<ts = ~ ch = ~ ts' =>, da /c = ~ c = /=, TIB /'stative (with color terms), have, get (elsewhere)/, phonology: since most roots begin with a consonant and there is a phonemic rule that /c/ → [ék] <ts> etween word boundary and a consonant, this prefix is only rarely found as [ék] <ch>; there is also an allomorphic rule that {c-} → /c/ /ts/> before glottalized consonant, syntactic analysis: derivational prefix; found in <tshá:xw>, /lc=ê-x=ll/, /'get a wife'/, <tskwí:m>, /lc=k*i-ml/, /'be red, (have red)/, */'get red'/ rejected, <tsqwá:y>, /lc=q*ê-yll/, /'be yellow, be green, (have yellow/green)/; for EB there are two cases of minimal contrast, forms with ts= vs. without (p'íp'eq'el with diminutive vs. tsp'íp'eq'el, and q'íq'eqel with continuative vs. tsq'íq'eqel); the ts= forms may be a little more intense, deeper in the color, than the forms without. This would fit with the literal meanings for each set ("going a little white" vs. "have/get/be in a state of going a little white", "going a little black" vs. "have/get/be in a state of going a little black"); or if one uses the -ish meaning, "a little whitish" vs. "have/get/be in a state of a little whitish", etc.). For Chilliwack speaker NP there are quite a few such contrasts, in fact with inceptives based on all the roots but xwíkw', gray, qálq rose, and st'áwel purple. Sumas speaker AH has minimal contrasts between forms with s= and with c=; tsqwóqwíyel and sqwóqwíyel don't seem semantically distinct, but there are a number of colors labelled by tskwíkwemel and a number by skwíkwemel; on the Munsell charts she did with us these two are are fairly evenly mixed with each other, though the forms with ts= are found mostly close to the focus, while the s= forms occur close to the focus but also as the farthest away from the focus (C4, E6, I2, C35, etc.). NP's charted forms also show such a contrast: under tsqw'íxw ts= forms are more focal, while s= forms are more distant from focus, blackest; under tsqwá:y ts= forms are at intense margins, while s= forms are at light margins or blackest; under tsméth' ts= forms are at light margins, some dark, while s= forms are one ex. next to focus; under tskwím ts= forms are at intense margins, while s= forms are at light margins or near focus; under tskwími + R5= ts= forms are more focal, while s= forms are more distant from focus; under tsq'ítx ts= forms are (one ex.) browner, while s= forms are one ex. bluer, darker?; under p'éq' ts= forms are not found, while, s= forms are closer to /p'êq'/ than non-statives; under tsp'iqw' ts= forms are at I35, H34, D32, darker or lighter, while s= forms are at F34 but focused at H32, and sp'íp'eq'el at I36; ("Intense margins" refers to margins between colors other than white or black.). Chehalis speaker EB has no /s=/ forms to contrast. Tait speaker TG has one contrast, tsqwóqwíyel vs. sqwóqwíyel, where the ts= form is more focal than most of the examples of the s= form., syntactic analysis: derivational prefix, see charts by Rob MacLaury, see dialect form <ch>; found in.<ts'=q'êyx>, /lc=q'êyxll/, /'black, be black'/, <tsqwá>y, /lc=q*êyll/, /'green, yellow, be yellow or green'/, <tsméth' ~ (rarely) ts'méth'/, /lc=mêè (sometimes c'=mêè)'ll/, /'blue, be blue'/, <tskwí:m>, /lc=k*i-ml/, /red, be red'/, <tskwí:mequ>, /lc=k*i-m=êq'ill/, /red-head(ed)/, <ts' meth'ô:les>, /lc'=mêè'=á=lssl/, /'blue eyes'/, <tsqw'íxw ~ ts'qw'íxw>, /lc=q"ix" ~ c'=q"ix"ll,

<xw=>, da /lx"=//, ANA /on the vulva, in the vagina/, syntactic analysis: derivational prefix, comment: <xw=> on the vulva, in the vagina is rarely attested in material I have gathered (probably due to my not having asked for forms containing it and due to the modesty used by the elders in translating those they gave me); another complicating factor in recognizing it is the fact that there are other prefixes with the same shape (xw= always, xwe= become, get, xw= used after s= nominalizer, xw= meaning uncertain but used esp. with words suffixed with =ts=s = on the face and some other body part suffixes; comment: other forms with this suffix include three place names: 1.) <Xwh'kw'ém> (lx"=è=k"==\textgreek{\textomega}ml) small creek near American Bar used to heal sores said to mean sores but is not the same as the word for sores and may mean literally place to bring sores in the vagina/vulva; 2.) <Xwyélés ~ Lexwyélés> rock up the Harrison River from the old Chehalis Indian cemetery which also has marks near it called Tracks of Mink (<Sxéyleltels te Sxqíxílya>); this place is the subject of a story told in Boas (Bertz translation, 1980 version:34) about a woman with this name, who had teeth in her vagina and bit off Mink's right hand (so his tracks can still be seen where he ran out of her house) and was soon transformed into rock by the Transformer, <Xá:ls>; thus the name probably means literally (always) teeth in the vagina since <xwélés> means teeth and <le=> means always; 3.) <Xwhthéstel> place across the Fraser River from Q'alelíktel, where the root is <thís=tel ~ tsís=tel> horn, antler,. Salish cognate: Musqueam /lx"=/ vulva; inward, inhering; possessing (probably several homophonous suffixes)—Suttlès ca1984:13.4.7 gives some very clear examples: /lx"=è= big vulva from /è= big, lx"-?éy'\ textgreek{\textomega} clean vulva from /?éy'\ good, clean lx"=è=\textgreek{\textomega}è=\textgreek{\textomega}t/ put one's hand on a woman's vulva (from /k"è=\textgreek{\textomega}=\textgreek{\textomega}t/ (grasp s-o/s-th with one's hand), /s=è=x=\textgreek{\textomega}=\textgreek{\textomega}t/ woman's pubic hair from /q"=\textgreek{\textomega}/ body as in /q"=\textgreek{\textomega}=\textgreek{\textomega} put one's hand on a woman's vulva, in the vagina and possibly /lx"-mèq"/ misarry from /mèq"/ burst, and as in <xwpelákw>, /lx"=pè=\textgreek{\textomega}=\textgreek{\textomega}=\textgreek{\textomega}t/ I peek under a woman's skirt, (catch sight of a woman's vulva/vagina), attested by Elders Group (9/21/77), also possibly as in <xwpóysekel>, ds /lx"=páysekel/, I to bicycle (of a woman), ride a bicycle (of a woman), attested by RG & EH (4/9/99 Ling332).

confessing to things one has done which are taboo in Catholic religion;, comment: if this occurs as first person passive of non-control transitive verbs and here yields a very plausible meaning, they managed to/happened to make me, I was managed/happened to be made to. =íl is also likely since one must go, come, get to Catholic confessions, =íl is the only remaining suffix possible (the intransitivizer could occur in this position) and have, get is also semantically plausible with the root xáxe sacred, taboo, especially with the sense of get taboo because one is confessing to things one has done which are taboo in Catholic religion,, comment: if this derivation is right, there should be a form, xáxemílexw /s=x=íl=émQ=íl=úx=/ (manage/happen) to get s-o to go to confession, or there once was such a form and the first person passive of it has been petrified or crystallized with the meaning given by today’s elders, to confess, go to confession, if the form is not petrified and xáxemílexw can still be used, then the translation for xáxemílem should be corrected here to something like they got me to go to confession or I go to confession, root xáxe sacred, holy, taboo, possibly =íl=émQ intransitivizer, have, get, possibly root =ílQ go, come, get, become, probably =ílQ non-control transitivizer (manage to/happen to/accidentally), probably =íl=émQ passive first person patient/object, phonology: probable consonant-loss or consonant merger (=íl=í → i), the retention of unstressed i is made more likely before stressed object pronoun endings as in first person passive, with =íl retaining stress only before the unstressed third person object -exw, syntactic analysis: transitive verb-passive, attested by IHTTC (9/9/77), AD (9/29/77).

the outdoor fire is built specially and the witnesses (family and friends of the departed) are instructed to stand quietly around the fire but out of a line between the fire and the
nearby graveyard where the deceased were buried, people can get ghosted or have their souls taken
by the spirits or get a twisted jaw if bumped by the spirits coming to get food, children are kept
away because they are especially vulnerable, the ceremony is quite moving and powerful., some of
the newly deceased's favorite possessions are also burned on the fire and some are passed through

' or '

Either form of the apostrophe here stands for what is known in linguistics as a glottal stop when it appears after a vowel. When it appears after a consonant it stands for what is known in linguistics as glottalization; when it occurs after consonants it is treated as part of the characters that make up that letter in the Stó:lô writing system. Only on very rare cases, in Upriver Halkomelem, does glottal stop occur after a consonant when that consonant is also found glottalized in other words; to show an actual glottal stop follows such a plain consonant, they are separated with a dash, as in <ets-'ets> stutter.

While glottal stop is rare at the end of a word and before consonants in Upriver Halkomelem (most have changed to length), glottal stop actually occurs as the onset of every word spelled with an initial vowel in the Stó:lô writing system. Since it is predictable there, it is not written there. The same is true for most root forms beginning in this dictionary; any written with an initial vowel begin with a glottal stop when they occur word initially; some also have the glottal stop when prefixed, as in <s'ith'em> clothes. Some never occur word initially and do not have a glottal stop when prefixed. When reduplicated those roots which have an initial glottal stop, also copy it as C1 (consonant 1 of the root).

Since the apostrophe is not written at the start of words and roots with initial glottal stop, there are no entries needed for this letter in the Stó:lô orthography. In the other dialect groups of Halkomelem, Downriver Halkomelem and Island Halkomelem, glottal stop can occur after most if not all consonants and is much more frequent. Thus a separate symbol is needed in those dialects for glottal stop, so that glottalized consonants and consonant followed by glottal stop can be shown correctly and separately. Tesó:s te mestiyexw!

In some cases a glottal stop is added to separate a vowel final root or stem and a vowel initial suffix, but more often the vowels are allowed to merge and combine according to rules described in Galloway 1977 and 1993. In the international phonetic alphabet, glottal stop is written with a question mark without the dot. Below are two examples. The first shows a reduplicated stem with the glottal stop reduplicated. The second example shows a suffix which sometimes uses glottal stop to separate it from a root or stem which ends in a vowel. In both cases I have spelled the stem or suffix with an apostrophe to show how it works, but in the dictionary and writing system normally, the initial glottal stop or apostrophe will always be left off. Thus will be found under the letter <a> under <al'alíy> and the suffix will be found under <=ó:ylha> in the letter <o>.
