A Corrigendum on

Characterizing Adult Cochlear Supporting Cell Transcriptional Diversity Using Single-Cell RNA-Seq: Validation in the Adult Mouse and Translational Implications for the Adult Human Cochlea
by Hoa, M., Olszewski, R., Li, X., Taukulis, I., Gu, S., DeTorres, A., et al. (2020). Front. Mol. Neurosci. 13:13. doi: 10.3389/fnmol.2020.00013

In the original article, there was a mistake in the Supplementary Material file "Data_Sheet_2_Characterizing Adult Cochlear Supporting Cell Transcriptional Diversity Using Single-Cell RNA-Seq_Validation in the Adult Mouse and Tran," which contains Supplemental Figures S14 to S24, where the p-value appeared to be greater than 1 in some cases. This was due to a multiplier being cut off from the column display. In cases, where the p-value is 0.0 this indicates that the p-value < 0.0001.

The authors apologize for this error and this does not change the scientific conclusions of the article in any way. The original supplementary material has been updated.
