In the article “CT Muscle Density, D₃Cr Muscle Mass, and Body Fat Associations With Physical Performance, Mobility Outcomes, and Mortality Risk in Older Men,” there was an error in the Results section of the Abstract. In that section, in the second sentence, the confidence

intervals for the relative risks for mortality per 1 standardized unit increase in muscle density were incorrectly stated as (95% CI: 0.74, 0.70). In fact, the correct confidence intervals were (95% CI: 0.74, 0.96). The authors apologize for this error. This error has been corrected.
