TECHNICAL SUPPLEMENT

This technical supplement provides the tables and maps upon which the analysis included in the report for the Economic Development Administration of the U.S. Department of Commerce, “Economic Needs of Asian Americans and Pacific Islander in Distressed Areas” (award 99-06-07479) was based.

Neighborhood Profiles & Maps

This appendix contains detailed neighborhood profiles and maps of low-income APA areas in the following MSAs:

- Chicago
- Long Beach (Little Phnom Pen)
- Los Angeles (Koreatown)
- Lowell
- New Orleans
- New York City (Chinatown)
- New York City (Jackson Heights)
- Orange County (Little Saigon)
- Sacramento
- Saint Paul
- San Francisco (Chinatown)
- Seattle
- Stockton (Cambodian)
- Stockton (Filipino)
- Hawaii Study Area, Oahu
- Hawaii Study Area, Molokai
- San Francisco (Samoan)

Data Notes

In some cases the tract boundaries used to construct study areas differ between the 1990 and 2000 census. In most cases, these changes are relatively minor however. We note where the differences in boundaries are noticeable and may impact comparisons across years.

Because the urban structure varies across MSAs, the scale used for employment density on maps may vary by orders of magnitude. Likewise, the residential density differs significantly between cities. These differences also influence the selection of definition of areas that are adjacent to low-income APA communities. In some cases, we selected areas within half a mile around our core study area. In some areas, we adjusted this definition of adjacent areas on a case-by-case basis to ensure a reasonable comparison area. Adjacent areas are mapped for review.

Tabulations of worker flow into and out of study areas are based on 1990 Census Transportation Planning Package data. No data are available for some of the areas under consideration. In other areas, transportation analysis zone (TAZ) boundaries do not exactly match the boundaries for our study areas; in such cases we have made an effort to select TAZs that match our geography as closely as possible.

Chicago Study Area

Figure 1. Chicago Study Area—Shading represents the percent APA at the census tract level for Chicago.

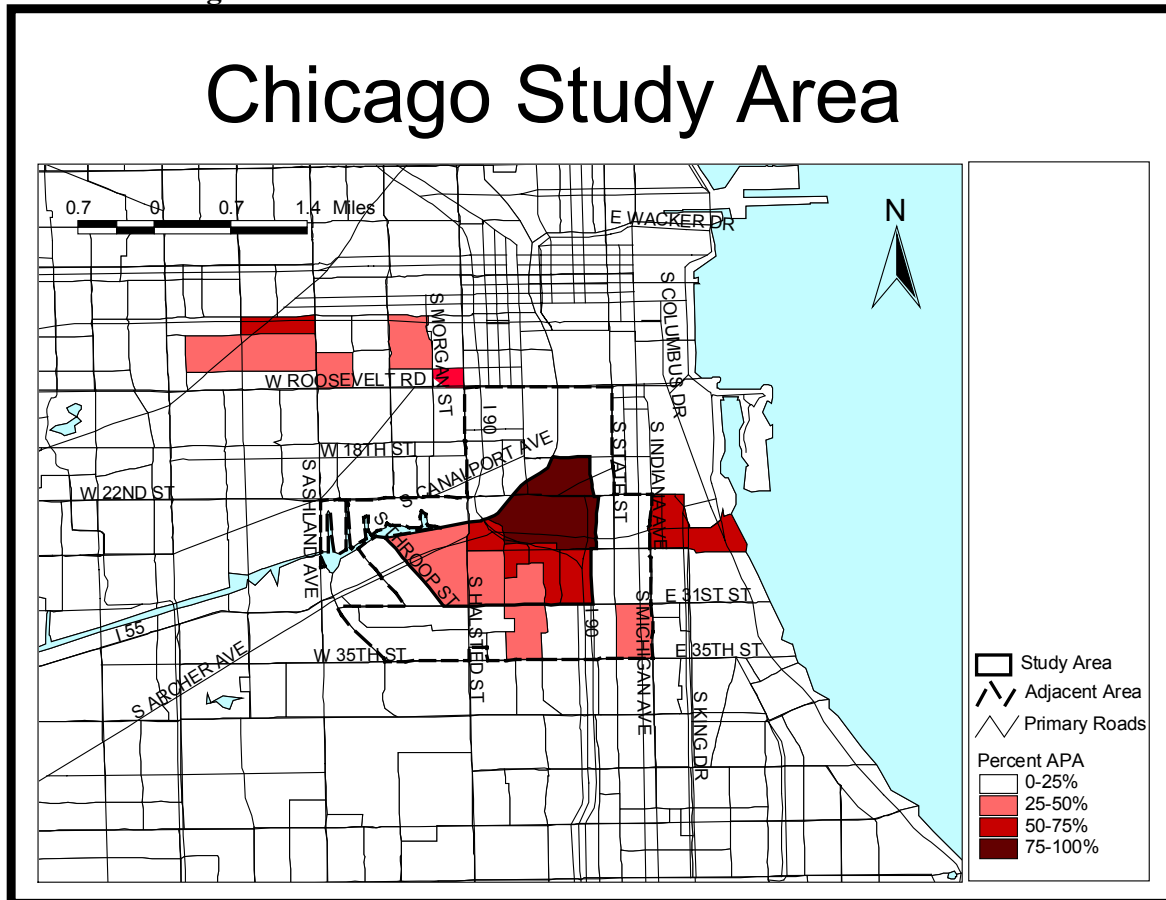

Figure 1 provides the model to profile neighborhoods for all study areas. We identify core census tracts in the MSA, which are delineated by a heavy black. The expanded study area also includes adjacent census tracts within about a half-mile of the core; these are used for comparison. Statistics have been prepared for a number of characteristics. In the following tables, we profile three areas: the core study area, the expanded study area, and the region. Tables include basic racial breakdowns, housing characteristics, poverty statistics, information about job availability, and information about commuting patterns within the study areas.

Table 1. Basic Demographics using 1990 and 2000 census returns: Chicago Study Area

| | Study Area | | Expanded Study Area | | MSA | |
|--------------------|----------------------|-----|----------------------|-----|----------------------|-----|

Figure 30. Stockton Study Area F: Employment Density

Stockton Study Area 'F' Job Density

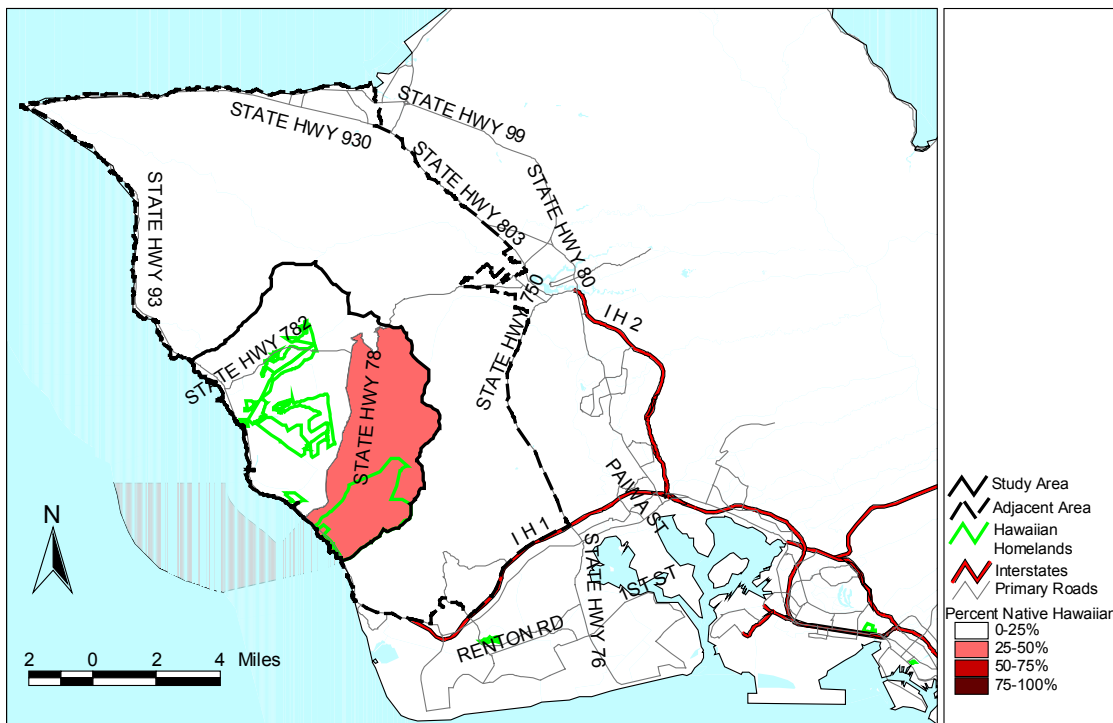

Hawaii Study Area, Oahu

The reporting format for Hawaii has been modified somewhat from the standard format adopted for all other MSAs. For both the Molokai and Oahu study areas, separate tabulations are included for areas within the study area that are designated as native Hawaiian homelands. In the case of Molokai, the study area encompasses the entire island, with the adjacent area defined as the rest of Maui County¹. Finally, the maps for Oahu and Molokai depict percent native Hawaiian rather than combined APA.

Figure 31. Oahu Study Area: Percent Native Hawaiian

Oahu Study Area

¹ Molokai is mostly in Maui County except for a small area on the north shore, which is actually a separate county (Kalawao County). Since the 2000 population for this county is only 147, and since administration for Kalawao County is mostly handled by Maui County, for the purposes of this study Kalawao is combined with Maui.
