

BIBLIOGRAPHIA NUDIBRANCHIA

Second Online Edition, Annotated

compiled by
Gary McDonald
17 September 2009

This bibliography is an attempt to list all publications which mention nudibranchs, with the exception of textbooks of invertebrate zoology and field guides to the general marine fauna of geographic areas. In the case of the latter, I have included those to which I have access, but have not attempted to list all field guides available. I also have not made a thorough search for theses and dissertations, but have included all those of which I am aware. Citations were compiled from Biological Abstracts, its RRM counterpart & antecedent, BIOSIS, Current Contents, Zoological Record, Russell's Index Nudibranchia (1971) & supplement (1986), & Opisthobranch Newsletter. Additional citations were gleaned from the "references cited" sections of numerous nudibranch articles. Recent citations are from weekly updates from ISI Web of Knowledge, Ovid Citations, & CSA Illumina Database: Zoological Record Plus. Approximately 5% of the included articles have not been seen, so some citations may be incomplete or possibly in error. Comments, corrections, or additions are always welcome & may be emailed to: meduck@ucsc.edu.

The list of species after each citation lists the species names which are mentioned in the article, with the following exceptions: 1) if a species name was listed only as a junior synonym in a formal synonymy, it is not included 2) if a species is mentioned only as the type species of a genus, it is not included. Generally, alternate or incorrect spellings are not listed, e.g.: *Austrodoris kerguelensis* is listed as *Austrodoris kerguelenensis*; *Hexabranhus mormosus* is listed as *Hexabranhus morsomus*; *Tritonia diomedea* is listed as *Tritonia diomedea*; *Aegirus* is listed as *Aegires*; *Thethys* is listed as *Tethys*; *Onchidorus* is listed as *Onchidoris*; etc. In cases where the abbreviation cf. (confer) is used in a species name in an article, in order to make it easier to search for all occurrences of the name, I have omitted the abbreviation from the species list (e.g. *Onchidoris* cf. *depressa* is listed as *Onchidoris depressa*). The species were listed by quickly skimming each article, so it is possible that a few species were overlooked, especially in some of the older articles of which I have poor photocopies, or in a few of the older articles in which the scientific names are not printed in italics. In articles which mention only genera but no species, I have listed the genera. In articles which mention both a genus and species within the genus, generally I have listed only the species. In articles which mention species, by genus only, such as many of the articles on neurophysiology or learning using specimens of *Hermisenda crassicornis* and *Tritonia diomedea*, I have listed them as *Hermisenda* and *Tritonia* respectively, as they appeared in the article. In articles which list unnamed species with numbers, I have omitted the numbers (e.g. *Doris* sp. 1, *Doris* sp. 2 are listed as *Doris* sp.). In articles which mention neither species nor genera, but do mention higher taxa within the Nudibranchia, I have listed the higher taxa. In the case of some of the older literature (e.g. Fredol, 1865), where formal scientific names were not used, if it is obvious which species is being referred to, I have used the scientific name equivalent, in order to make it easier to find all the references to a particular species (e.g. *Scyllaea pelagica* for Scyllée pélagique); if it is not obvious, then I have listed the name as shown in the article (e.g. *Phanerobranche doriforme*). In articles which don't mention any species or genera but refer only to nudibranchs in general, I have listed "nudibranchs" or "Nudibranchia" etc., as listed in the article. For articles which listed only the initials of the author's first and/or middle names, I have added the full name when I could determine it by reference to other sources. For articles published between 1800 and 1900, I usually consulted The Royal Society of London, Catalogue of Scientific Papers, for more recent articles I consulted online library catalogues, especially for theses or dissertations. The full name of an author is usually included only for the first article listed by the author, additional citations by the same author include only the initials of first and middle names.

If I am aware of an online source for a book or article, I have listed the URL for that item, but I have not attempted to find all of the online sources. Some of the URLs may be accessible only with subscription, because I access items via an account through my university library, which has paid access to many of the journals online.

Nota Bene: This bibliography was created for my personal use, originally in Word Star, later exported to WordPerfect, and finally to Microsoft Word. The Word file contains my notes and comments, including an accession number for each reprint, interlibrary loan request status, etc. For web publication, I have used macros to remove my notes prior to converting to portable document format; so it is possible that some notes were not removed by the macros, especially if the note was not correctly formatted when entered. Because this bibliography is now consists of over 1000 pages, I have quickly perused, but not carefully proofread every page to insure that all notes are removed. This is, of course, a "work in progress", and as such will never be complete; and because I created this bibliography for my own use, it is offered "as is",

without any guarantee of the accuracy of each citation. As I upload this to the internet, I am awaiting the arrival of several interlibrary loans, each of which will add to the completeness of this bibliography, but they will have to be included in the next edition.

I wish to thank all those who have regularly provided reprints of their publications, and those authors who sent bibliographies of their publications. I especially thank Julia Nunn, who sent me several articles of which I was previously unaware. I also wish thank the staff of the Interlibrary Loan Department, McHenry Library, University of California, Santa Cruz; especially Joan Hodgson, Betty Rentz, & Alice Morrow, each of whom went to great lengths to obtain some of the more obscure articles which were difficult to find.
