CM Call for Submissions

Virginia K Dawson

In keeping with our mission to provide high-quality, peer-reviewed information that expands biomedical knowledge and promotes human and animal health through the study of laboratory animal disease, the editors of *Comparative Medicine* are seeking authors for a special topic issue entitled, "Animal Models of Neurologic and Neuropsychiatric Disease."

George DeMarco, Director of Animal Medicine, and Associate Professor of Pathology at the University Massachusetts Medical School volunteered to be the guest editor and has already obtained authors for topics on traumatic brain injury, large animal models of neurodegenerative disease, and immune-mediated neurologic disease. Below is a list of topics for which authors are being sought.

General Classification of Neurologic and Neuropsychiatric Disease

Rodent models of Neurodegenerative Diseases. Examples of relevant diseases would include:

- Alzheimer disease
- Parkinson disease
- Huntington disease
- Motor neuron diseases
- Non-Alzheimer dementias
- Spinocerebellar ataxia
- Prion diseases

Lysosomal Storage diseases (LSDs)

Stroke

Peripheral Neuropathies. Examples of relevant diseases would include:

- Diabetic neuropathy
- Chemotherapy-Induced Peripheral Neuropathy
- Human Immunodeficiency Virus-Associated Sensory Neuropathy

Seizure disorders

Neuropsychiatric Disorders. Examples of relevant diseases would include the following:

- Depression
- Bipolar
- Schizophrenia
- Autism

We encourage researchers to volunteer to author an article for this issue. Your contribution could lead to medical discoveries that could have a wide-ranging impact on the quality of life for people and animals for many years to come.

We also welcome suggestions for additional relevant topics. If you would be willing to write or solicit a manuscript for this issue, please contact Virginia Dawson at Virginia.dawson@aalas.org.
