ERRATUM

TO: All recipients of UCRL-10448
FROM: Technical Information Division
SUBJECT: UCRL-10448, "Energy Matrices of the f^5 Electron Configuration,"
by E. G. Wybourne, September 1962.

Since the completion of this report C. W. Nielson⁷ has informed the author that he has now calculated the electrostatic matrices of all the f^n configurations. In the light of his calculations, the following corrections should be made:

September 1962

ABSTRACT

The complete electrostatic and spin-orbit matrices of the f^5 electron configuration have been calculated and are presented in a tabulated form.

[†]Address after December 1, 1962: Division of Chemistry, Argonne National Laboratory, Lemont, Illinois.

ENERGY MATRICES OF THE f^5 ELECTRON CONFIGURATION

B. G. Wybourne

Lawrence Radiation Laboratory
University of California
Berkeley, California

September 1962

Introduction

In a recent paper¹ the calculation of the complete spin-orbit matrices for the f^5 electron configuration was reported. In an earlier paper² the complete electrostatic matrices were presented. Using the results of these calculations it has been possible to construct the energy matrices of the f^5 configuration. These energy matrices have been applied to the analysis of the crystal spectra of trivalent samarium, dysprosium³ and plutonium ions.⁴ To permit a wider usage of these energy matrices they have been tabulated by a direct print-out of the matrix elements which were checked and stored on punched cards. The results are given in this report.

THE ENERGY MATRICES

The states of the f^5 configuration have been labeled using the group theoretical classification of Racah.⁵ The labeling of the states is performed by introducing two groups which provide two additional sets of quantum numbers W and U. The first is a set of three integral numbers $W \equiv (w_1 w_2 w_3)$ with $w_1 \geq w_2 \geq w_3 \geq 0$ and all $w \leq 2$, while the second is a set of two integers $U \equiv (u_1 u_2)$ with $2 \geq u_1 \geq u_2 \geq 0$. By specifying the quantum numbers WUSL all the states of the f^5 configuration are distinctly labeled with the exception of some of the states labeled with $U \equiv (31)$ and $U \equiv (40)$ where the same LS label occurs twice.⁶ These states can only be separated in an arbitrary manner and in this we shall follow the separation made by Racah and in the tabulation of the matrix elements indicate one of the doubly occurring states with an asterisk.

The matrix elements of electrostatic interaction are expressed in terms of the parameters E^0 , E^1 , E^2 , and E^3 , which have been defined by Racah⁵ in terms of the Slater radial F_k integrals as follows:

$$E^0 = F_0 - 10F_2 - 33F_4 - 286F_6$$

$$E^1 = (70F_2 + 231F_4 + 2002F_6)/9$$

$$E^2 = (F_2 - 3F_4 + 7F_6)/9$$

$$E^3 = (5F_2 + 6F_4 - 91F_6)/3$$

The energy contribution involving the parameter E^0 is a constant for all terms of a given f^n configuration and is omitted from the tabulation. The coefficient associated with E^0 for a given f^n configuration is given by the general expression:

$$e_0 = n(n - 1)/2$$

Checking procedures for the electrostatic matrices have been given in an earlier paper.² Recently Nielson and Nutter⁷ have checked the tables of Racah's paper⁵ from which these matrix elements were evaluated and found one misprint. In table Vlb of Racah paper the entry $(30 | X(K^*) | 31)$ should read $72(1122/23)^{1/2}$. The matrix element $(f^n(221)(30)K|e_2|f^n(221)(31)K^*)$ apart from the phase, should be $216(2346)^{1/2}/46$. This one matrix element in the f^5 , f^6 , and f^7 electrostatic energy matrices must be corrected in the earlier tabulations.^{2,8}

The spin-orbit matrices were completely checked out by diagonalization of the matrices and requiring that the eigenvalues calculated in jj coupling be reproduced.³

TABULATION OF THE MATRICES

As the energy matrices are real and symmetric only the diagonal elements and the lower half of the off-diagonal elements are reproduced. The first entry is the J value of the energy matrix and immediately below it is the rank of the matrix. In the first and second columns of the tabulation the row and column in which the particular matrix element occurs is specified. The phase of the matrix element is given immediately after the column number (where no phase is indicated it is to be taken as positive). The actual matrix elements are given in the form $a\sqrt{b/d}$ where a is in column three the b in column four and d in column five. The matrices of the coefficients of the parameters are presented in the sequence E^1 , E^2 , E^3 and ZETA where ZETA represents the spin-orbit parameter ζ_f . As the coefficients of E^1 are diagonal in the WUSL scheme the Racah classification has been specified along side of the matrix elements of E^1 . Only the non-zero matrix elements have been tabulated.

ACKNOWLEDGMENTS

These matrices were largely calculated during the authors researches at the University of Canterbury and at the Johns Hopkins University. The work performed at Johns Hopkins University was done with partial support from the U. S. Air Force Office of Scientific Research.

This report was prepared as an account of Government sponsored work. Neither the United States, nor the Commission, nor any person acting on behalf of the Commission:

- A. Makes any warranty or representation, expressed or implied, with respect to the accuracy, completeness, or usefulness of the information contained in this report, or that the use of any information, apparatus, method, or process disclosed in this report may not infringe privately owned rights; or
- B. Assumes any liabilities with respect to the use of, or for damages resulting from the use of any information, apparatus, method, or process disclosed in this report.

As used in the above, "person acting on behalf of the Commission" includes any employee or contractor of the Commission, or employee of such contractor, to the extent that such employee or contractor of the Commission, or employee of such contractor prepares, disseminates, or provides access to, any information pursuant to his employment or contract with the Commission, or his employment with such contractor.
