Corrections for five figures and six tables are noted for the paper, which do not affect the conclusions reported:

- in the double-differential cross-sections at particle level in the resolved topology as a function of $|\Delta\phi(t\bar{t})|$, $|y^{t,\text{had}}|$ and $|y^{t\bar{t}}|$ as a function of the number of additional jets, in certain cases the values of $|y^{t,\text{had}}|$ and $|y^{t\bar{t}}|$ were shifted by 0.5 and the values of $|\Delta\phi(t\bar{t})|$ were shifted by $0.14 \cdot i$, where i is the number of additional jets. This issue affects Fig. 34 and Tables 11 and 12;
- the differential cross-section at particle level in the boosted topology as a function of the number of small- R jets clustered inside a top-quark candidate was actually evaluated as a function of the number of small- R jets clustered inside the large- R jet with higher transverse momentum. As a consequence, the definition of the multiplicity of additional small- R jets referred to the large- R jet with higher transfer momentum rather than to the top-quark candidate. This issue affects the single-differential cross-section as a function of N^{subjects} and

$N^{\text{extrajets}}$ and the double-differential cross-sections as a function of $p_T^{t,\text{had}}$, $m^{t\bar{t}}$ and $p_T^{t\bar{t}}$ in bins of $N^{\text{extrajets}}$. This issue affects Figs. 42, 50, 51 and 52 and Tables 13, 14, 15 and 16.
