Peer reviewed
On behalf of all the contributing authors, we are excited to extend this focused issue in *Translational Andrology and Urology (TAU)* on new updates in male genitourinary (GU) reconstruction and trauma.

This issue brings together the research and evidence-based practices of many experts in our field. These experts are thought-leaders and have contributed to advancing male GU reconstruction and trauma in a multitude of ways. We are extremely grateful for all the authors’ hard work and contribution to make this a unique and exciting issue in *TAU*.

Since the June 2014 *TAU* special issue on male GU reconstruction, we include new topics that have surfaced to the forefront of our field in the last 4 years. We selected these topics as they have resonated with many urologists at national/international meetings. The readership will enjoy novel manuscripts on stems cells/regenerative medicine, transgender surgery, updates in pelvic fracture urethral injury/posterior urethroplasty, the role of robotics in reconstructive urology, and unique topics such as the reconstructive urology workforce/fellowship training paradigms.

We hope that you enjoy this special issue on male GU reconstruction and trauma.

Lastly, we would like to extend our sincere gratitude to the editorial staffs at *TAU* who have made this issue possible.

**Acknowledgements**

We would like to acknowledge Dr. Jack W. McAninch, MD, FACS for his inspiration, mentorship, and friendship.
