Tace for harpsichord

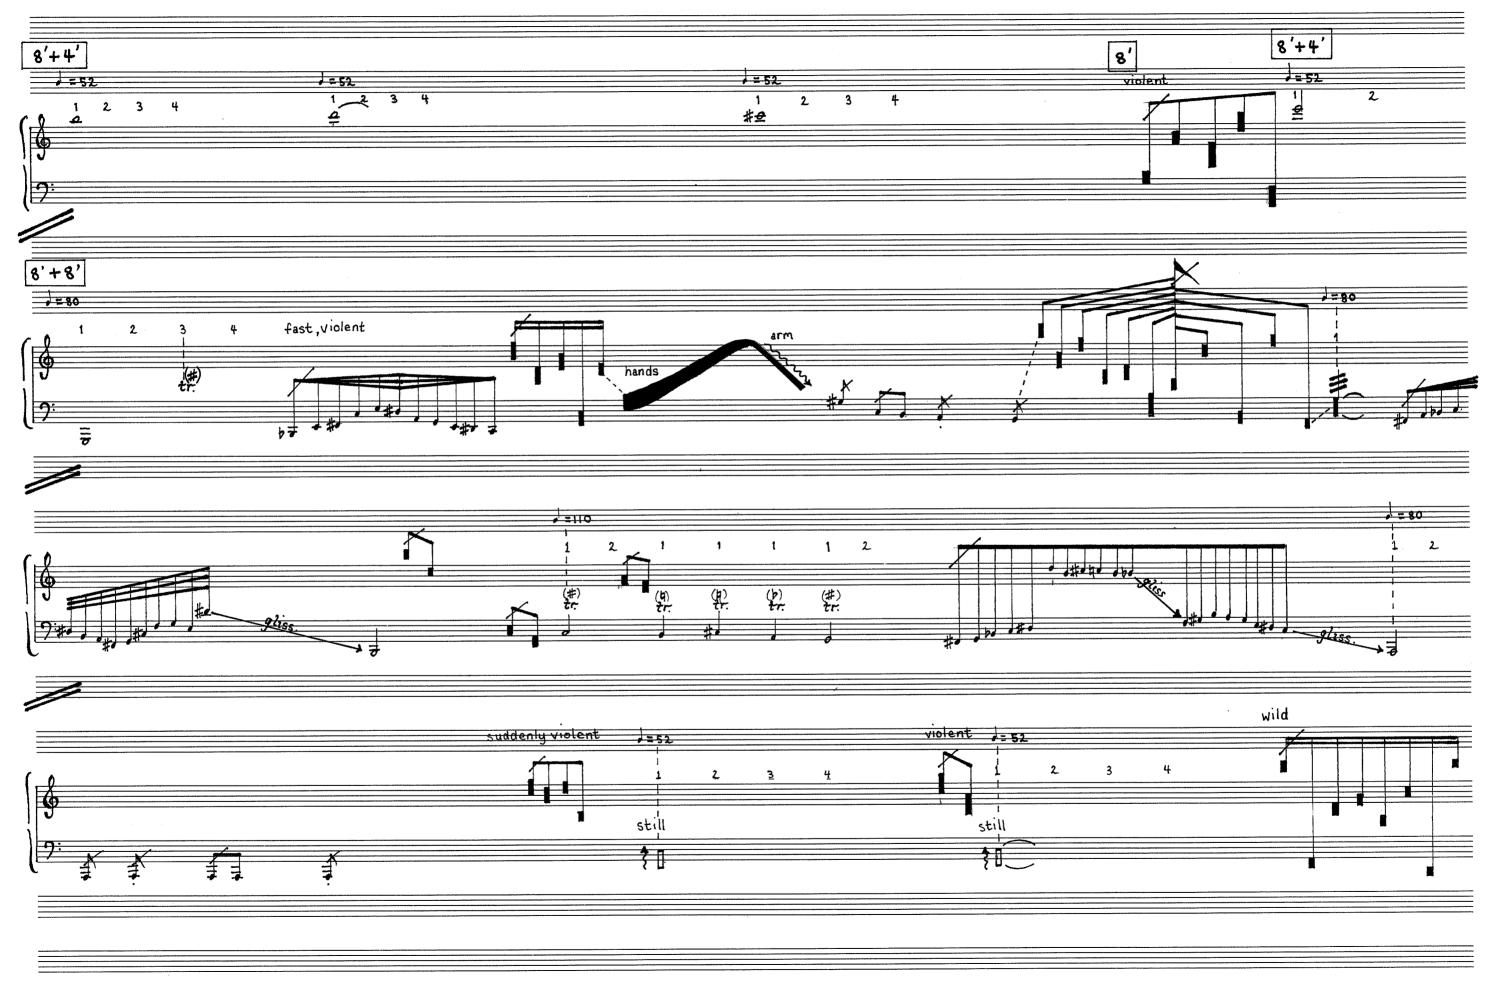

Sam Cave

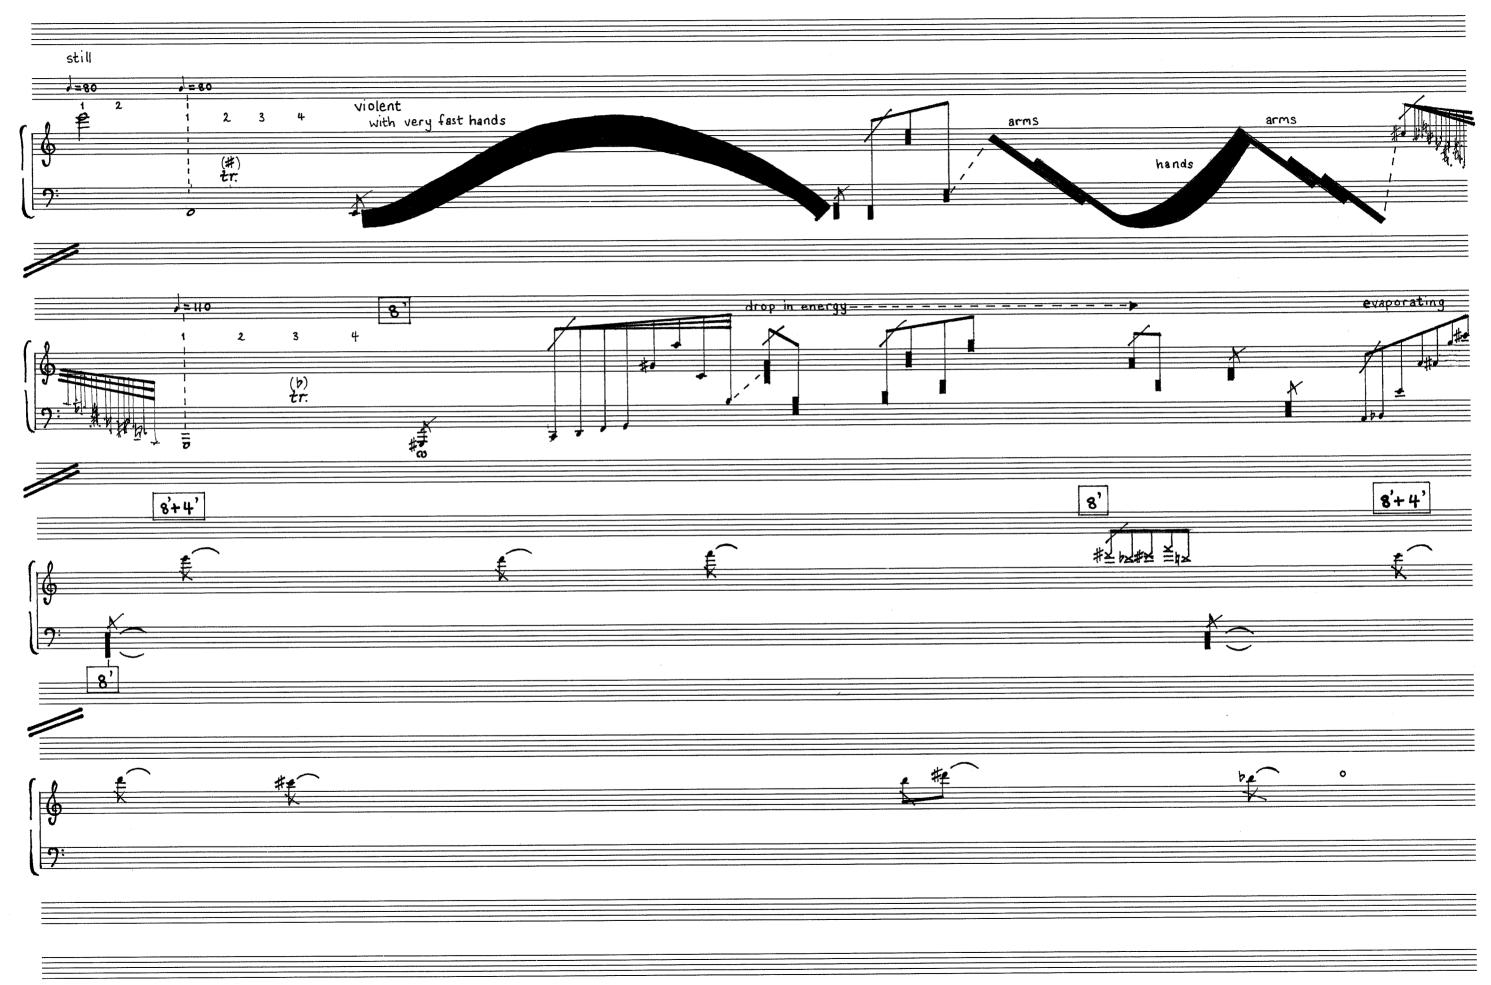

| Notational Considerations for Grace  |
|--|
| A - Blank space (unless metered) is to be interpreted in a 'time-space' style, and is to be interpreted by the performer freely  |
| but within a certain principle of relativity   |
| i.e. $\leftarrow x \rightarrow$ is a shorter time length than $\leftarrow x \rightarrow$   |
| B - The basic rhythmic unit of Grace is the acciaccutura $(K)$ , which as such does not take up any notated time and therefore   |
| does not interfere with the above principle of blank space.  |
| Within & there are some variations:  |
| 1. 1777 - always reasonably quick as they are still 'grace notes' but can be interpreted as slower or faster as the performer needs  |
| 2. 1777 - always fast but neither (1.) nor (2.) have to be regular in length of each note.   |
| 3. III or III - accel. or deccel. but does not have to be in regular way.  |
| The first of the second of the |
| 4. [] = e.g. With the inflection of the given tuplet   |
| 5. 6 or Life - count the duration or play the rhythm at the directed tempo. In cases such as this point A is  1 2 3 4  negated.  |
| 6. if grace notes are combined with tempo figuration place the grace notes approximately around the  |
| 1 2 3 4 indicated beats  |
| C- Graphic notation  |
| Graphic notation is also used in this piece, always in order to represent dense, fully chromatic clusters of notes   |
| 1. 1 - a cluster played by striking the keys with flat hands. Position on stave indicates relative pitch compass.  |
|  |
| arm arm  2. Or - much bigger cluster played with arm   |
|  |
| 3. I - fluid rising and falling of chromatic clusters either with arms or hands as directed. When played with hands the  |
| desired sound should not be static consecutive clusters: rather, it should be a shimmering continuous ripple of  |
| hands and fingers. The length and thickness of the gesture on the page indicates relative length and density   |
| of the sounds.   |
|  |

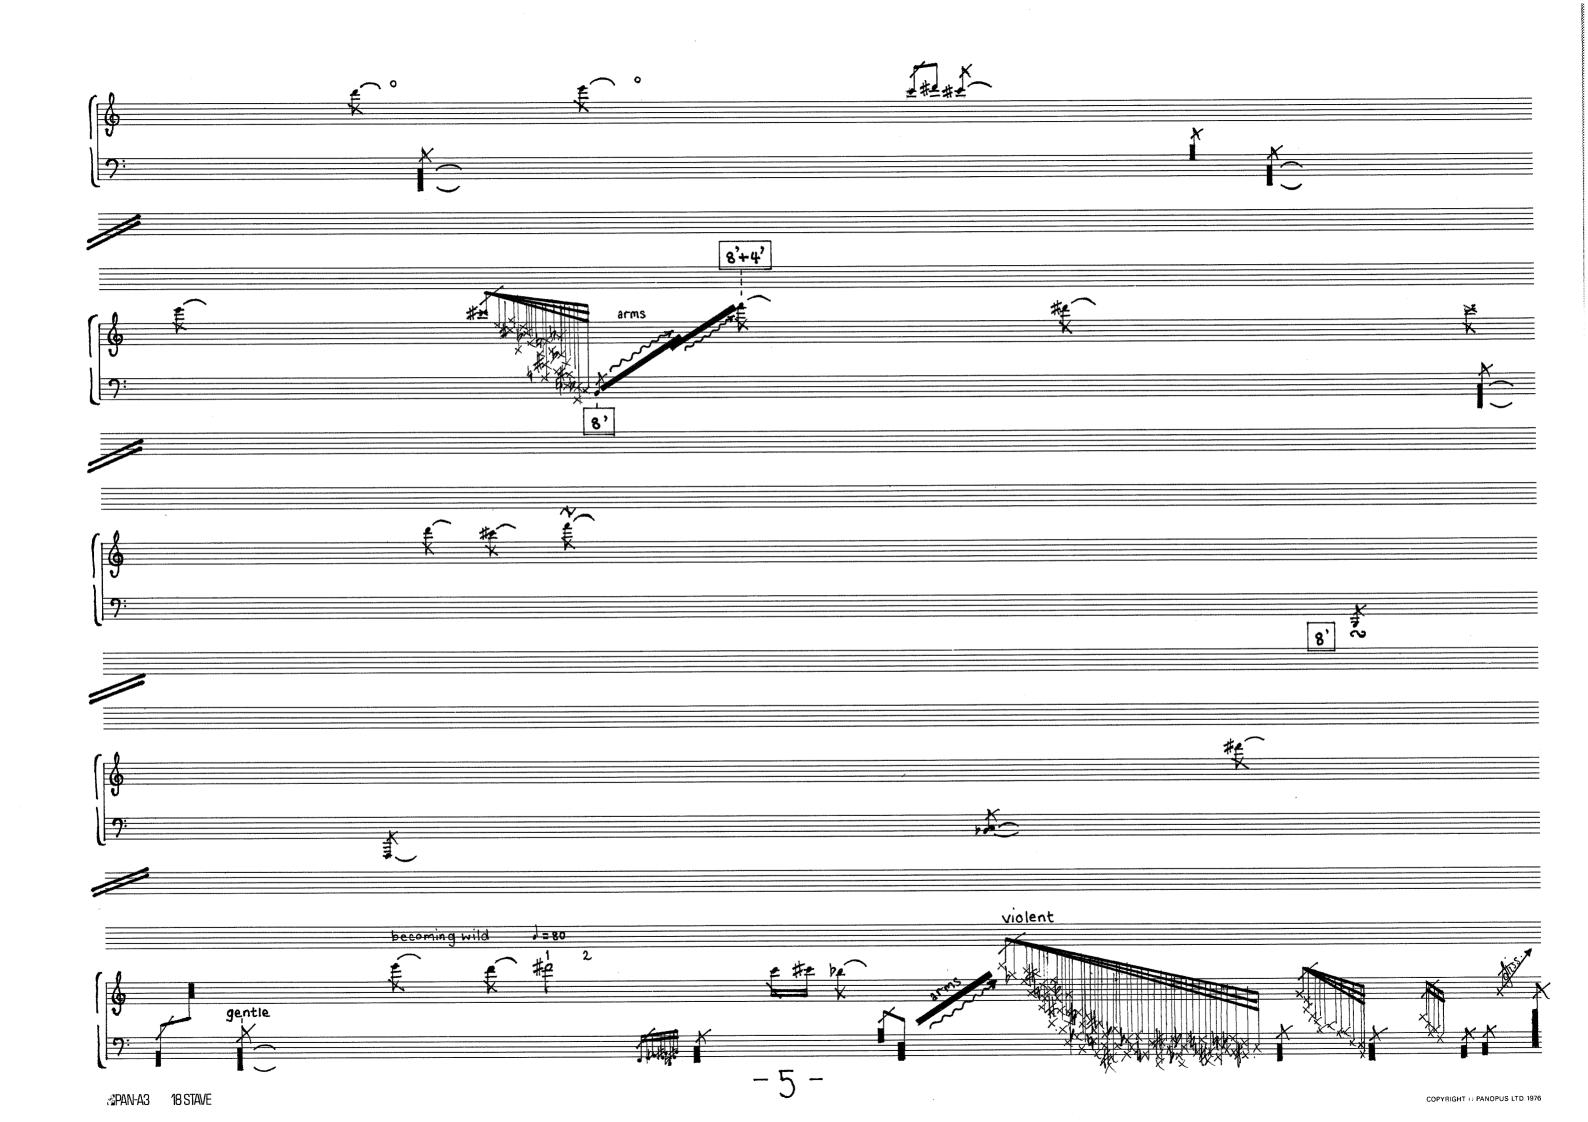

| W + - About and production of allocks  |
|--|
| 4 shows exact synchronization of events  |
|  |
|  |
|  |
| 5. /- shows immediate succession of events   |
|  |
